## Revision History

March, 2015

| Version | Date       | Description of changes  |
|---------|------------|---|
| 01      | 2014/04/18 | New setup   |
|         | 2014/04/23 | Page 10~12<br>1. Modified pin function and pin name.<br>ERR_CSB →ERR_RES1.<br>LNSW_RES1 →LNSW_CSB.<br>PNSW →PNSW_SCL.<br>MIPITE_SCL →MIPITE_SDA.<br>TPSYNC_SDA →TPSYNC.<br>Page 11, .28 and 75<br>2. Resolution selection 768RGBx1280→768x1024.<br>Page 156<br>3. Updated section 14.2 chip outline dimension.<br>Page 104<br>4. Updated Gamma PVP/N 8, PVP/N 9, and PVP/N 10 default value.<br>Page 76<br>5. Updated video timing table. |
|         | 2014/05/15 | Page 81~102<br>1. Updated section 8.4 User define command for MIPI interface.   |
|         | 2014/05/29 | Page 156<br>1. Updated Chip size (w/i scribe line).   |
|         | 2014/06/10 | Page 142<br>1. Modified VDDI_RX and VDDI_D operation voltage 1.65~1.95V.  |
|         | 2014/06/19 | Page 131<br>1. Updated OTP read flow chart.   |
|         | 2014/07/01 | Page 142<br>1. Modified VDDI_RX and VDDI_D operation voltage 1.7~1.9V.  |
|         | 2014/10/14 | Page 14<br>1. Updated section 4.2 Value of wiring resistance to each pin.<br>Page 15~19<br>2. Updated section 5.1~5.4 example circuit.<br>Page 29<br>3. Updated section 6.2 figure 6.1 GOA connection.<br>Page 32<br>4. Updated section 6.4 input interface and pin mapping.  |
|         | 2014/11/28 | Page 147<br>1. Updated section 12.5 LVDS mode DC electrical characteristics table.<br>Page 17<br>2. Updated L1 and L2 value.<br>Page 171<br>3. Updated Part NO.   |

2402 CH TFT LCD Source Driver  
with MIPI/LVDS TCON

Himax Technologies, Inc.  
<http://www.himax.com.tw>

**Version 02**

March, 2015

## 1. General Description

The HX8260-A is a single-chip solution that combines source driver control, gate driver control and power supply circuit to drive TFT LCD.

The HX8260-A supports the resolution of 800RGBx1280, 768RGBx1024, 720RGBx1280, and 600RGBx1024 and with 6bit+2bit dithering in color depth.

The HX8260-A supports several interface modes, including MIPI DSI interface mode LVDS interface mode.

## 2. Features

- Interface: LVDS (85MHz); MIPI 4 lane (480Mbps/lane)
- Channel Number: 2402 channel output, build in source driver and TCON
- Resolution :800RGBx1280,768RGBx1024,720RGBx1280,600RGBx1024
- Color : 6bits +2-bit dithering
- SPI interface
- VCOM is programmable adjustment by OTP
- Support GOA gate control signal
- Inversion :1/2/4/8 dot inversion, column inversion
- Support Zigzag panel
- Support CABC function
- Build-in PFM Booster controller to drive DC/DC converter circuit -- VSP & VSN
- Build-in Charge Pump controller to drive DC/DC converter circuit – VGH, VGL & VCL

| MIPI data lane could be swapped by LNSW_RES0 and LNSW_CSB pin, but LVDS data lane could not be swapped. |         |   |                                 |                                 |                  |         |         |         |         |         |         |         |         |         |         |         |         |

Table 4.2: MIPI interface

| Pin name | I/O | Description   |
|----------|-----|---|
| MIPI_CSB | I   | MIPI mode SPI CHIP enable signal. default pulled H. |
| MIPI_SD  | I/O | MIPI mode SPI DAT signal. default pulled H.         |
| MIPI_SCK | I   | MIPI mode SPI clock signal. default pulled H.       |

Table 4.3: SPI interface

| Pin name     | I/O | Description                                 |
|--------------|-----|---|
| GOUT_R[22:1] | O   | GOA control signal at right side. (VGL~VGH) |
| GOUT_L[22:1] | O   | GOA control signal at left side. (VGL~VGH)  |

Note: (1) IO cell voltage is between VGH and VGL.

Table 4.4: Gate driver (GOA) control pin

| Pin name         | I/O | Description   |
|------------------|-----|---|
| S1<br>┆<br>S2400 | O   | Source output pin.  |
| SL1,SR1          | O   | Source output pin. It is available when zigzag function enable. |

Note: (1) IO cell voltage is between VSP and VSN.

Table 4.5: Source output pin

| Pin name                                     | I/O | Description  |
|--|-----|--|
| VCI  | P   | Power input 2.6V ~ 6V.   |
| VSP  | P   | Positive power input for source driver and power circuits (4.5V ~ 6V).                                     |
| VSN  | P   | Negative power input for source driver and power circuits (-4.5V ~ -6V).                                   |
| VDDI_D                                       | P   | Power input 1.8V for TCON and Logic.   |
| VDDI_RX                                      | P   | Power input 1.8V for MIPI & LVDS RX.   |
| VPP_OTP                                      | P   | Power input for OTP programming (7.6V). Leave this pin open or connect it to VSP when not programming OTP. |
| DRVP   | O   | CLK for VSP PFM and HX5186-C.  |
| DRVN   | O   | CLK for VSN PFM and HX5186-C.  |
| VGLO2  | P   | VGLO Regulator output 2.   |
| VGMAH  | P   | Positive gamma high voltage.   |
| VGMAH  | P   | Negative gamma high voltage.   |
| VCI_REG                                      | P   | Regulator output for internal reference.   |
| VCL  | P   | VCL charge pump output.  |
| C_VCL_1P<br>C_VCL_1N<br>C_VCL_2P<br>C_VCL_2N | O   | VCL flying cap. pin.   |
| VGH  | P   | VGH charge pump output.  |
| C_VGH_1P                                     | O   | VGH flying cap. pin.   |

| Pin name                         | I/O | Description                          |
|----------------------------------|-----|--------------------------------------|
| C_VGH_1N<br>C_VGH_2P<br>C_VGH_2N |     |                                      |
| VGL                              | P   | VGL charge pump output.              |

| VCOM                             | P   | VCOM Regulator output.               |
| VSSD                             | G   | Digital circuit ground (0V).         |
| VSSA                             | G   | Analog circuit ground (0V).          |
| VSSPHY                           | G   | Analog circuit ground (0V).          |
| VSSCP                            | G   | Ground for charge pump circuit (0V). |

Table 4.6: Power and ground pin

| Pin name     | I/O | Description                                     |
|--------------|-----|---|
| TESTOUT[7:0] | O   | Test pin. Float these pin for normal operation. |
| TESTA[3:0]   | O   | Test pin. Float these pin for normal operation. |
| DUMMY        | N   | No connection.                                  |

Table 4.7: Others

### 4.2 Value of wiring resistance to each pin

The input wiring resistance values affect power or signal integrity and the display quality. So be sure to design using values that do not exceed those recommendations as below.

| Pin type       | Pin name | Resistance value( $\Omega$ ) | Capacitance value(pF) |
|----------------|----------|------------------------------|-----------------------|
| Power & Ground | VSSD     | < 3                          | -                     |
|                | VDDI_D   | < 5                          | -                     |
|                | VDDI_RX  | < 5                          | -                     |
|                | VCI      | < 5                          | -                     |
|                | VSSA     | < 3                          | -                     |
|                | VSP      | < 5                          | -                     |
|                | VSN      | < 5                          | -                     |
|                | VSSCP    | <5                           | -                     |
|                | VPP_OTP  | <10                          | -                     |
|                | VSSPHY   | <5                           | -                     |

| Pin type                      | Pin name          | Resistance value( $\Omega$ ) | Capacitance value(pF) |
|-------------------------------|-------------------|------------------------------|-----------------------|
| PFM & Charge Pump & Regulator | VCOM              | < 5                          | -                     |
|                               | VCI_REG           | <5                           | -                     |
|                               | VGLO2             | <5                           | -                     |

## 6. Panel Application

The HX8260-A supports the resolution of 800RGBx1280, 768RGBx1024 720RGBx1280, and 600RGBx1024

The TCON also can generate gate controller timing. These signals can support for general gate driver or GOA (Gate driver on Array).

### 6.1 Display resolution

#### 6.1.1 Display resolution configuration

Resolution selection can set by hardware or register. Hardware pin name is ERR\_RES1 and LNSW\_RES0. Register address is locates 0xB3 at page0. The relationship between pin and register is shows below.

| ERR_RES1 | LNSW_RES0 | Resolution  | Valid source channel |                 | Disable channel |
|----------|-----------|-------------|----------------------|-----------------|-----------------|
| 0        | 0         | 600RGBx1024 | 1(SL1)~900           | 1501 ~2400(SR1) | 901~1500        |
| 0        | 1         | 720RGBx1280 | 1(SL1)~1080          | 1321 ~2400(SR1) | 1081~1320       |
| 1        | 0         | 768RGBx1024 | 1(SL1)~1152          | 1249 ~2400(SR1) | 1153~1248       |
| 1        | 1         | 800RGBx1280 | 1(SL1)~1200          | 1201 ~2400(SR1) | -               |

Note: (1) Blue mark is typical application.

(2) For zigzag panel type, TCON will enable SR1 and SL1 channel.  
For strip panel type, TCON will disable SR1 and SL1 channel.

Table 6.1 : Display resolution setting

## 6.2 GOA connection

The HX8260-A can support GOA/GIP (Gate driver on array) function.

GOA output pin define can set by register. A multiplexer is built in GOA function that selects one of several GOA signals. GOA function showed as below. The detail GOA output signal setting please refer application note.

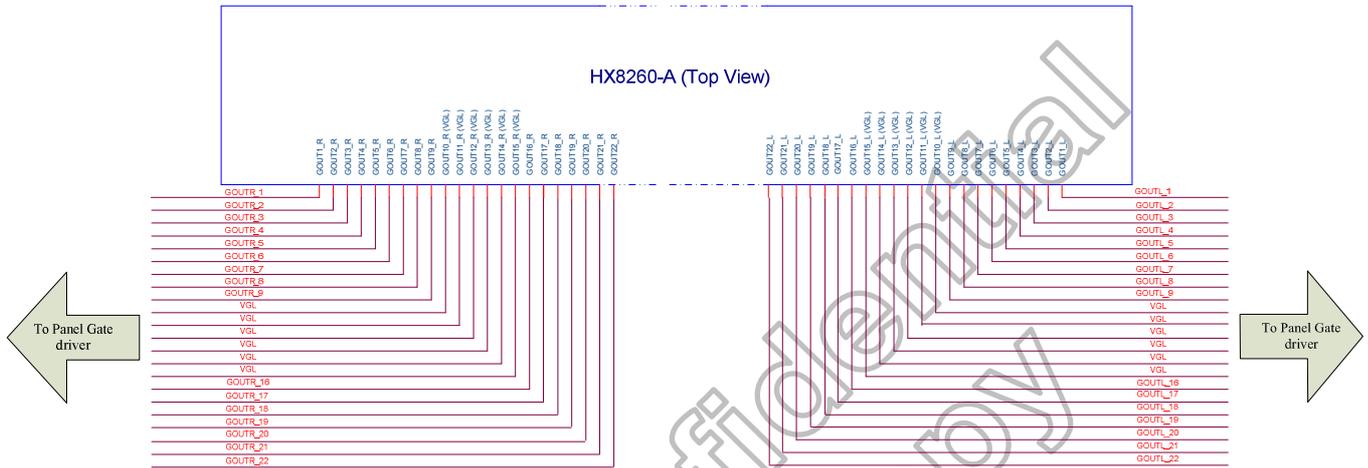

Figure 6.1: GOA wire example

### 6.3 Panel Structure

#### 6.3.1 Driving method for panel structure

HX8260-A can support 2 types of driving method – stripe and zigzag. User could control Register: ZIGZAG\_SEL and ZTYPE\_SEL [1:0] select Panel type as following Figure:

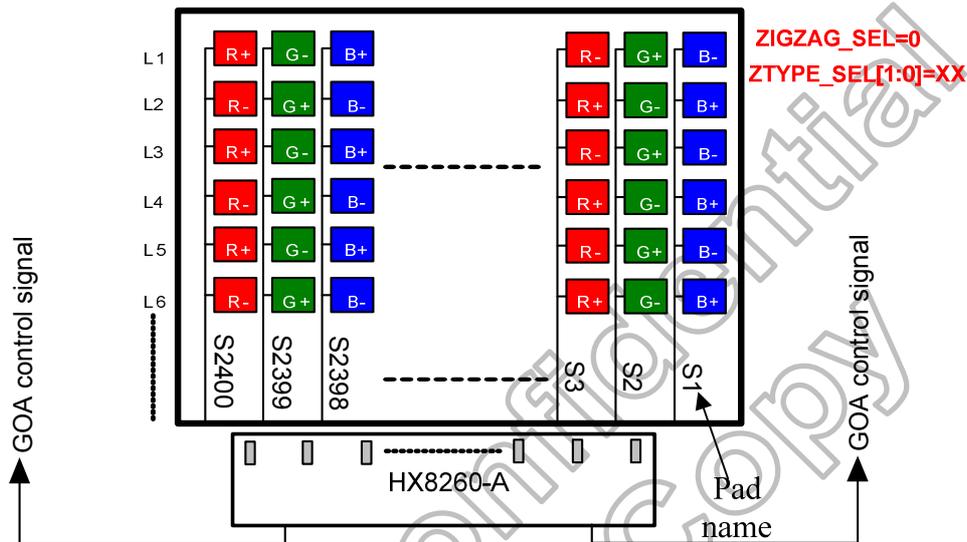

Figure 6.2 : Stripe driving method

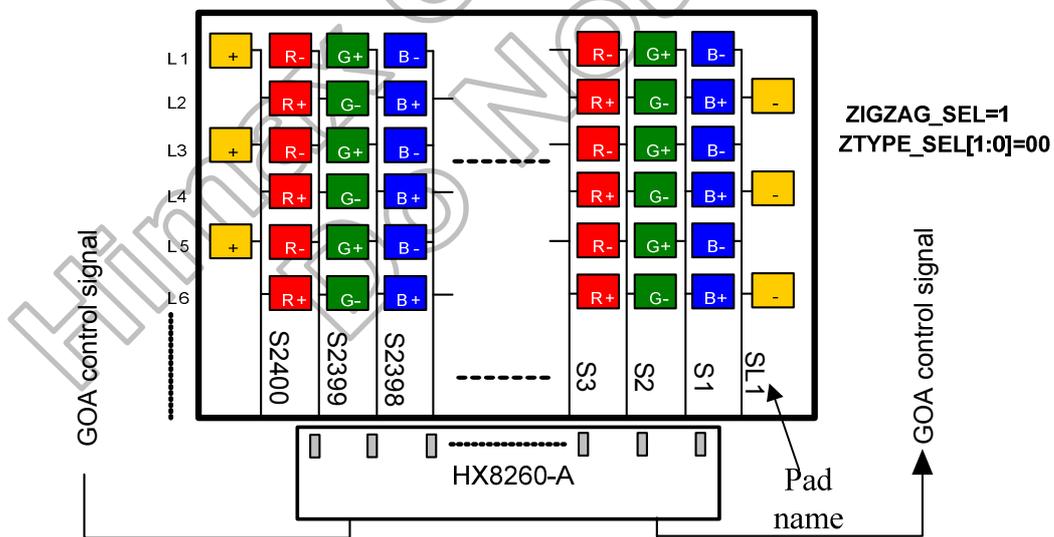

Figure 6.3: Zigzag type0 driving method

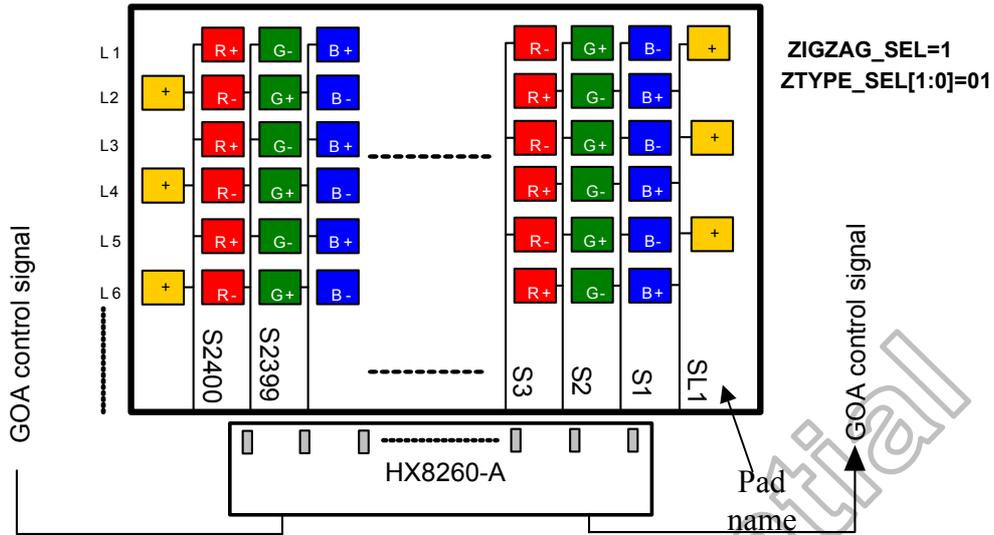

Figure 6.4: Zigzag type1 driving method

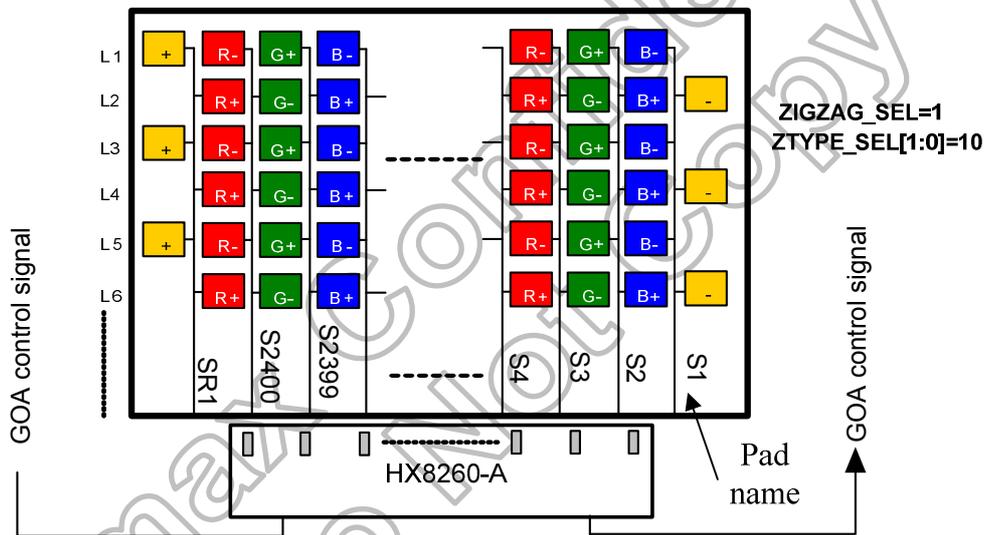

Figure 6.5: Zigzag type2 driving method

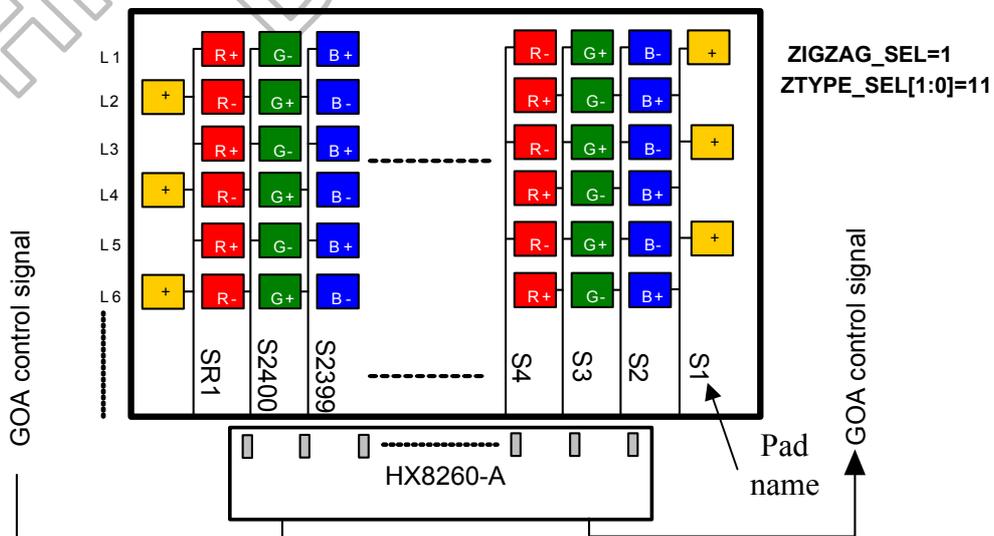

Figure 6.6: Zigzag type3 driving method

### 6.4 Input interface and pin mapping

HX8260-A support MIPI and LVDS interface,user can select input interface by IF\_SEL pin

#### 6.4.1 MIPI interface (IF\_SEL=1)

When IF\_SEL=1 HX8260-A set to MIPI interface,user could configure data lane arrangement by hardware pin PNSW\_SCL, LNSW\_CSB and LNSW\_RES0.

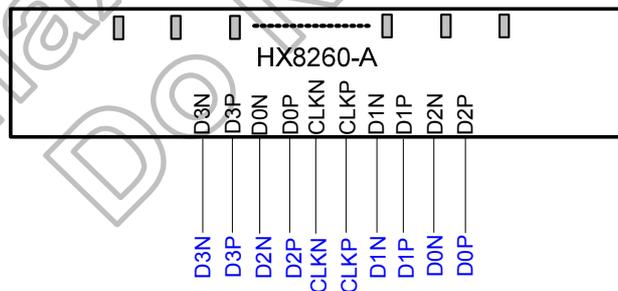

- PNSW\_SCL is for swap differential pair polarity.
- LNSW\_RES0 and LNSW\_CSB are for swap MIPI data pair.

Following table showed the MIPI lane swap pin mapping:

| Configuration |          |           | MIPI lanes mapping table |     |     |     |      |      |     |     |     |     |
|---------------|----------|-----------|--------------------------|-----|-----|-----|------|------|-----|-----|-----|-----|
| PNSW_SCL      | LNSW_CSB | LNSW_RES0 | D2P                      | D2N | D1P | D1N | CLKP | CLKN | D0P | D0N | D3P | D3N |
| 1             | 0        | 0         | D3P                      | D3N | D2P | D2N | CLKP | CLKN | D1P | D1N | D0P | D0N |
| 1             | 0        | 1         | D3P                      | D3N | D0P | D0N | CLKP | CLKN | D1P | D1N | D2P | D2N |

## 7. Interface

### 7.1 LVDS interface

The HX8260-A has a built-in single pixel LVDS receiver that converts data from differential serialized format to parallel output.

#### LVDS mode data input format

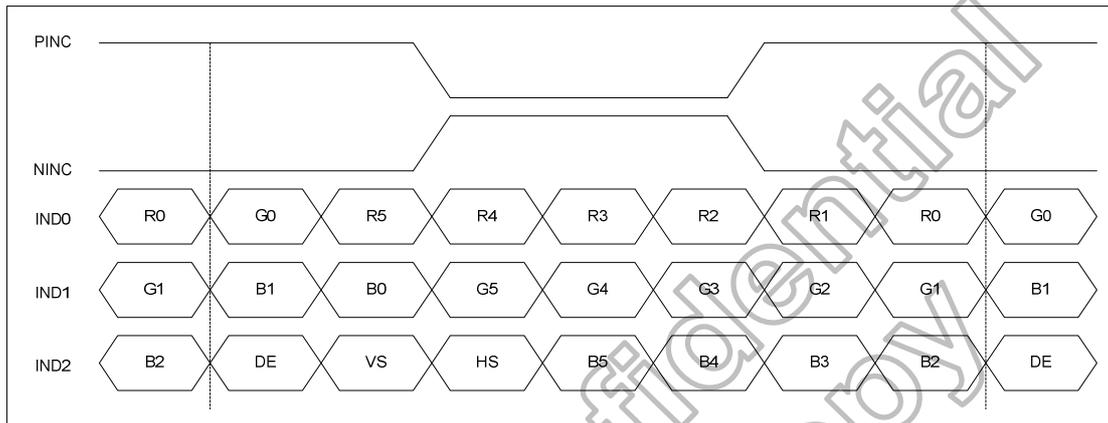

Figure 7.1: 6-bit LVDS input

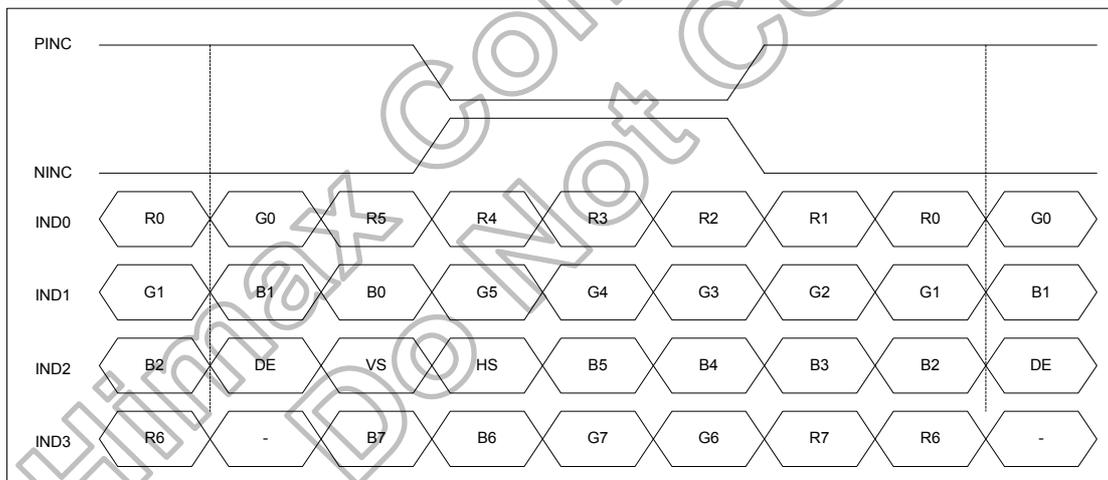

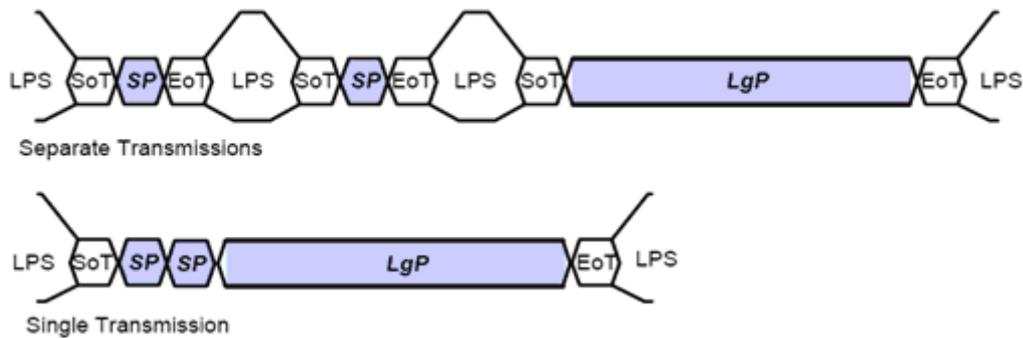

Figure 7.2: 8-bit LVDS Input

## 7.2 MIPI interface

### 7.2.1 DSI protocol

The protocol layer appends packet-protocol information and headers. The receiver side of a DSI Link performs the converse of the transmitter side, decomposing the packet into parallel data, signal events and commands. The DSI protocol permits multiple packets which is useful for events such as peripheral initialization, where many registers may be loaded separate write commands at system startup. Figure 7.3 illustrates multiple HS Transmission packets.

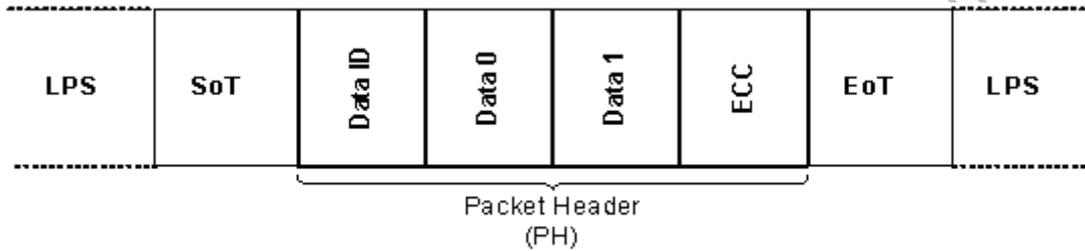

**Note:** (1) LPS: Low power state  
 SoT: Start of Transmission  
 SP: Short Packet  
 LgP: Long Packet  
 EoT: End of Transmission

**Figure 7.3: Multiple packets transmission**

The packet includes two types which are Long packet and Short packet. The first byte of the packet, the Data Identifier (DI), includes information specifying the type of the packet. Command Mode systems send commands and an associated set of parameters, with the number of parameters depending on the command type.

**Short packets** are four bytes in length including the ECC. Short packet is used for most Command Mode commands and associated parameters. Where Short packets format include an 8-bit Data ID followed by two command or data bytes and an 8-bit ECC. Figure 7.4 shows the structure of the Short packet.

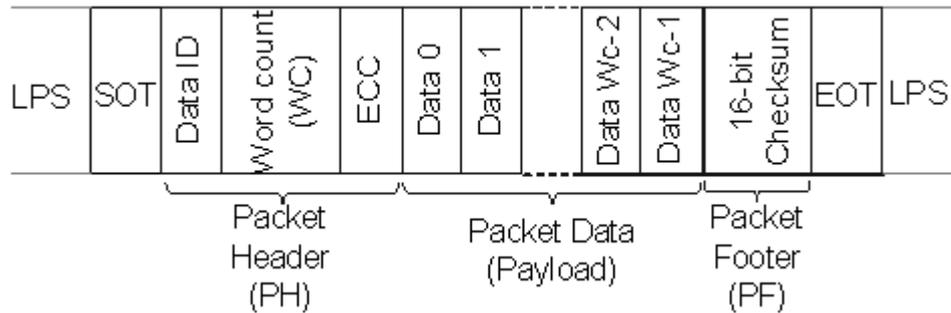

**Note:** (1) DI (**Data ID**): Contain Virtual Channel Identifier and Data Type.  
 ECC (**Error Correction Code**): The Error Correction Code allows single-bit errors to be corrected and 2-bit errors to be detected in the Short Packet.

**Figure 7.4: Structure of the short packet**

Himax Confidential  
Do Not Copy

**Long packets** specify the payload length using a two-byte Word Count field and then the payload maybe from 0 to 65,535 bytes in length. Thus Long packets permit transmission of large blocks of pixel or other data.. Figure 7.5 shows the structure of the Long packet. Long Packet Header composed of three elements: an 8-bit Data Identifier, a 16-bit Word Count, and 8-bit ECC. An application-specific Data Payload has Word Count \* bytes following the Packet Header. The Packet Footer has one element, a 16-bit checksum. Long packets can be from 6 to 65,541 bytes in length. Where 65,541 bytes = 4 bytes PH + (2<sup>16</sup>-1) bytes Payload + 2 bytes PF

- Note:** (1) DI (**Data ID**): Contain Virtual Channel Identifier and Data Type.  
 WC (**Word Count**): The receiver uses WC to determine the packet end.  
 ECC (**Error Correction Code**): The Error Correction Code allows single-bit errors to be corrected and 2-bit errors to be detected in the Packet Header.  
 PF (**Packet Footer**): Mean 16-bit Checksum.

**Figure 7.5: Structure of the long packet**

According to packet form, basic elements include DI and ECC. Table 7.1 shows format of Data ID.

|                      |     |                |     |     |     |     |     |
|----------------------|-----|----------------|-----|-----|-----|-----|-----|
| DI7                  | DI6 | DI5            | DI4 | DI3 | DI2 | DI1 | DI0 |
| VC (Virtual channel) |     | DT (Data type) |     |     |     |     |     |

**Table 7.1: Format of data ID**

- DI[7:6] → These two bits identify the data as directed to one of four virtual channels.  
 DI[5:0] → These six bits specify the Data Type, which specifies the size, format and, in some cases, the interpretation of the packet contents.

Due to Data Type (DT) mean format of transmission type, following figure Short- / Long-packet transmission command sequence.  
 Long packet writes Command / Parameters / Pixel Data

### 7.2.2 Processor to peripheral (forward direction) packets data types

The set of transaction types sent from the host processor to a peripheral, such as a display module, are shown in Table 7.2 Data Types for Processor-sourced Packets.

| Data type, hex           | Data type, binary  | Description packet                                     | Size  |
|--------------------------|--------------------|--|-------|
| 01h                      | 00 0001            | Sync event, V Sync start.                              | Short |
| 11h                      | 01 0001            | Sync event, V Sync end.                                | Short |
| 21h                      | 10 0001            | Sync event, H Sync start.                              | Short |
| 31h                      | 11 0001            | Sync event, H Sync end.                                | Short |
| 08h                      | 00 1000            | End of transmission packet ( <b>EoTp</b> ).            | Short |
| 02h                      | 00 0010            | Color Mode ( <b>CM</b> ) off command.                  | Short |
| 12h                      | 01 0010            | Color Mode ( <b>CM</b> ) on command.                   | Short |
| 22h                      | 10 0010            | Shut down peripheral command.                          | Short |
| 32h                      | 11 0010            | Turn on peripheral command.                            | Short |
| 03h                      | 00 0011            | Generic short WRITE, no parameter.                     | Short |
| 13h                      | 01 0011            | Generic short WRITE, 1 parameter.                      | Short |
| 23h                      | 10 0011            | Generic short WRITE, 2 parameter.                      | Short |
| 04h                      | 00 0100            | Generic READ, no parameter.                            | Short |
| 14h                      | 01 0100            | Generic READ, 1 parameter.                             | Short |
| 24h                      | 10 0100            | Generic READ, 2 parameters.                            | Short |
| 05h                      | 00 0101            | DCS short WRITE, no parameter.                         | Short |
| 15h                      | 01 0101            | DCS short WRITE, 1 parameter.                          | Short |
| 06h                      | 00 0110            | DCS READ, no parameters.                               | Short |
| 37h                      | 11 0111            | Set maximum return packet size.                        | Short |
| 09h                      | 00 1001            | Null packet, no data.                                  | Long  |
| 19h                      | 01 1001            | Blanking packet, no data.                              | Long  |
| 29h                      | 10 1001            | Generic long write.                                    | Long  |
| 39h                      | 11 1001            | DCS long write/write LUT command packet.               | Long  |
| 0Eh                      | 00 1110            | Packed pixel stream, 16-bit RGB, 5-6-5 format.         | Long  |
| 1Eh                      | 01 1110            | Packed pixel stream, 18-bit RGB, 6-6-6 format.         | Long  |
| 2Eh                      | 10 1110            | Loosely packed pixel stream, 18-bit RGB, 6-6-6 format. | Long  |
| 3Eh                      | 11 1110            | Packed pixel stream, 24-bit RGB, 8-8-8 format.         | Long  |
| X0h and XFh, unspecified | xx 0000<br>xx 1111 | DO NOT USE.<br>All unspecified codes are reserved.     | -     |

Table 7.2: Data types for processor-sourced packets

Under tables list all detail function of all data types

| <b>Sync event (H start, H end, V start, V end), data type=xx 0001 (x1h)</b> |                                   |                                   |
|---|-----------------------------------|-----------------------------------|
| <b>Data type, hex</b>   | <b>Function description</b>       | <b>Number of bytes</b>            |
| 01h   | V Sync start, start of VSA pulse. | 4 bytes<br>(DI + 00h + 00h + ECC) |
| 11h   | V Sync end, end of VSA pulse.     |                                   |
| 21h   | H Sync start, start of HSA pulse. |                                   |
| 31h   | H Sync end, end of HSA pulse.     |                                   |

**Note:** (1) V Sync start and V Sync end event represents the start and end of the VSA, respectively. Similarly H Sync start and H Sync end event represents the start and end of the HSA, respectively.

| <b>End of Transmission packet (EoTp)</b> |                                    |                                   |
|--|------------------------------------|-----------------------------------|
| <b>Data type, hex</b>                    | <b>Function description</b>        | <b>Number of bytes</b>            |
| 08h                                      | End of transmission packet (EoTp). | 4 bytes<br>(DI + 00h + 00h + ECC) |

| <b>Color mode status (Color Mode On, Color Mode Off)</b> |  |                                   |
|--|--|-----------------------------------|
| <b>Data type, hex</b>                                    | <b>Function description</b>  | <b>Number of bytes</b>            |
| 02h  | Color mode on that switches a video mode display module to a low-color mode for power saving.      | 4 bytes<br>(DI + 00h + 00h + ECC) |
| 12h  | Color mode off that switches a video mode display module from low-color display to normal display. |                                   |

| <b>Display status (shutdown command, turn-on command )</b> |  |                                   |
|--|--|-----------------------------------|
| <b>Data type, hex</b>                                      | <b>Function description</b>  | <b>Number of bytes</b>            |
| 22h  | Shutdown peripheral command that turns off the display in a video mode display for power saving. | 4 bytes<br>(DI + 00h + 00h + ECC) |
| 32h  | Turn on peripheral command that turns on the display in video mode display for normal display.   |                                   |

**Note:** (1) When use shutdown command; interface shall remain powered in order to receive the turn-on, or wake-up, command.

| <b>Generic Short WRITE Packet with 0,1,2 parameter</b> |   |                        |
|--|---|------------------------|
| <b>Data type, hex</b>                                  | <b>Function description</b>                           | <b>Number of bytes</b> |
| 03h  | Generic Short WRITE, no parameter.                    | (DI + 00h + 00h + ECC) |
| 13h  | Generic Short WRITE, 1 parameter.                     | (DI + P1 + 00h + ECC)  |
| 23h  | Generic Short WRITE, 2 parameters. (P1=Addr, P2=Data) | (DI + P1 + P2 + ECC)   |

**Note:** (1) P1=parameter1, P2=parameter2.

| Generic READ Request with 0,1,2 parameter |   |                        |
|---|---|------------------------|
| Data type, hex                            | Function description  | Number of bytes        |
| 04h                                       | Generic READ, no parameter.                                 | (DI + 00h + 00h + ECC) |
| 14h                                       | Generic READ, 1 parameter. (P1=Addr) only read 1 Data.      | (DI + P1 + 00h + ECC)  |
| 24h                                       | Generic READ, 2 parameters. (P1=Addr, P2=Burst read length) | (DI + P1 + P2 + ECC)   |

Note: (1) P1=parameter1, P2=parameter2.

| DCS Show WRITE Command with 0,1 parameter |   |                        |
|---|---|------------------------|
| Data type, hex                            | Function description                          | Number of bytes        |
| 05h                                       | DCS Short WRITE, no parameter.                | (DI + DCS + 00h + ECC) |
| 15h                                       | DCS Short WRITE, 1 parameter. (P1=DCS's data) | (DI + DCS + P1 + ECC)  |

Note: (1) P1=parameter1, DCS=DCS command.

| DCS command setting |  |  |
|---------------------|--|--|
| Data type, hex      | Function description   | Number of bytes  |
| 06h                 | DCS Read command, the returned data may be of Short or Long packet format.   | 4 bytes<br>(DI + DCS CMD.+00h + ECC)   |
| 39h                 | DCS Long Write/ Write _ LUT Command is used to send larger blocks of data to a display module that implements the Display Command Set. | Up to 65535 bytes<br>( DI + WC + ECC<br>+ DCS CMD.<br>+ Payload DATA(WC-1)<br>+ PF ) |

- Note: (1) For write part, If DCS Short Write command is followed by BTA, the peripheral shall respond with ACK when no error was detected in the transmission (**Host → Slave**). Unless an error was detected, the peripheral shall respond with Acknowledge with Error Report.
- (2) When use DCS Read Command, the Set Max Return Packet Size command will limit the size of returning packets.
- (3) The peripheral shall respond to DCS Read Command Request in one of the following ways:
- ◆ If an error was detected and corrected in Packet Header field by the peripheral, it shall send *Acknowledge with Error Report*. So the peripheral shall transmit the requested READ data packet with suitable ECC in the same transmission.
  - ◆ If no error was detected by the peripheral, it shall send the requested READ packet (**Short or Long**) with appropriate ECC and Checksum, if either or both features are enabled.
- (4) One byte <= Length of payload DATA <= 2<sup>16</sup>-1

| Generic Long Write |  |  |
|--------------------|--|--|
| Data type, hex     | Function description   | Number of bytes  |
| 29h                | Generic Long Write Packek is used to transmit arbitrary blocks of data from a host processor to peripheral in a Long packet.<br>Support Burst Write :<br>Parameter_1→MCS Addr(p1>B0)<br>Parameter_2→Address's data<br>Parameter_3→Address+1 's data<br>Parameter_4→Address+2 's data<br>:<br>Parameter_N→Address+N-1 's data | Up to 65535 bytes<br>( DI + WC + ECC<br>+ Payload DATA(WC)<br>+ PF ) |

- Note: (1) For write part, If Short Write command is followed by BTA, the peripheral shall respond with ACK when no error was detected in the transmission (**Host → Slave**). Unless an error was detected, the peripheral shall respond with Acknowledge with Error Report.
- (2) When use Read Command, the Set Max Return Packet Size command will limit the size of returning packets.
- (3) The peripheral shall respond to Read Command Request in one of the following ways:
- ◆ If an error was detected and corrected in Packet Header field by the peripheral, it shall send *Acknowledge with Error Report*. So the peripheral shall transmit the requested READ data packet with suitable ECC in the same transmission.
  - ◆ If no error was detected by the peripheral, it shall send the requested READ packet (**Short or Long**) with appropriate ECC and Checksum, if either or both features are enabled.
- (4) One byte <= Length of payload DATA <= 2<sup>16</sup>-1

| Return packet size setting |  |  |
|----------------------------|--|--|
| Data type, hex             | Function description   | Number of bytes                                    |
| 37h                        | Set Maximum Return Packet Size that specifies the maximum size of the payload in a Long packet transmitted from peripheral back to the host processor. | 4 bytes<br>(DI + Maximum Return Packet Size + ECC) |

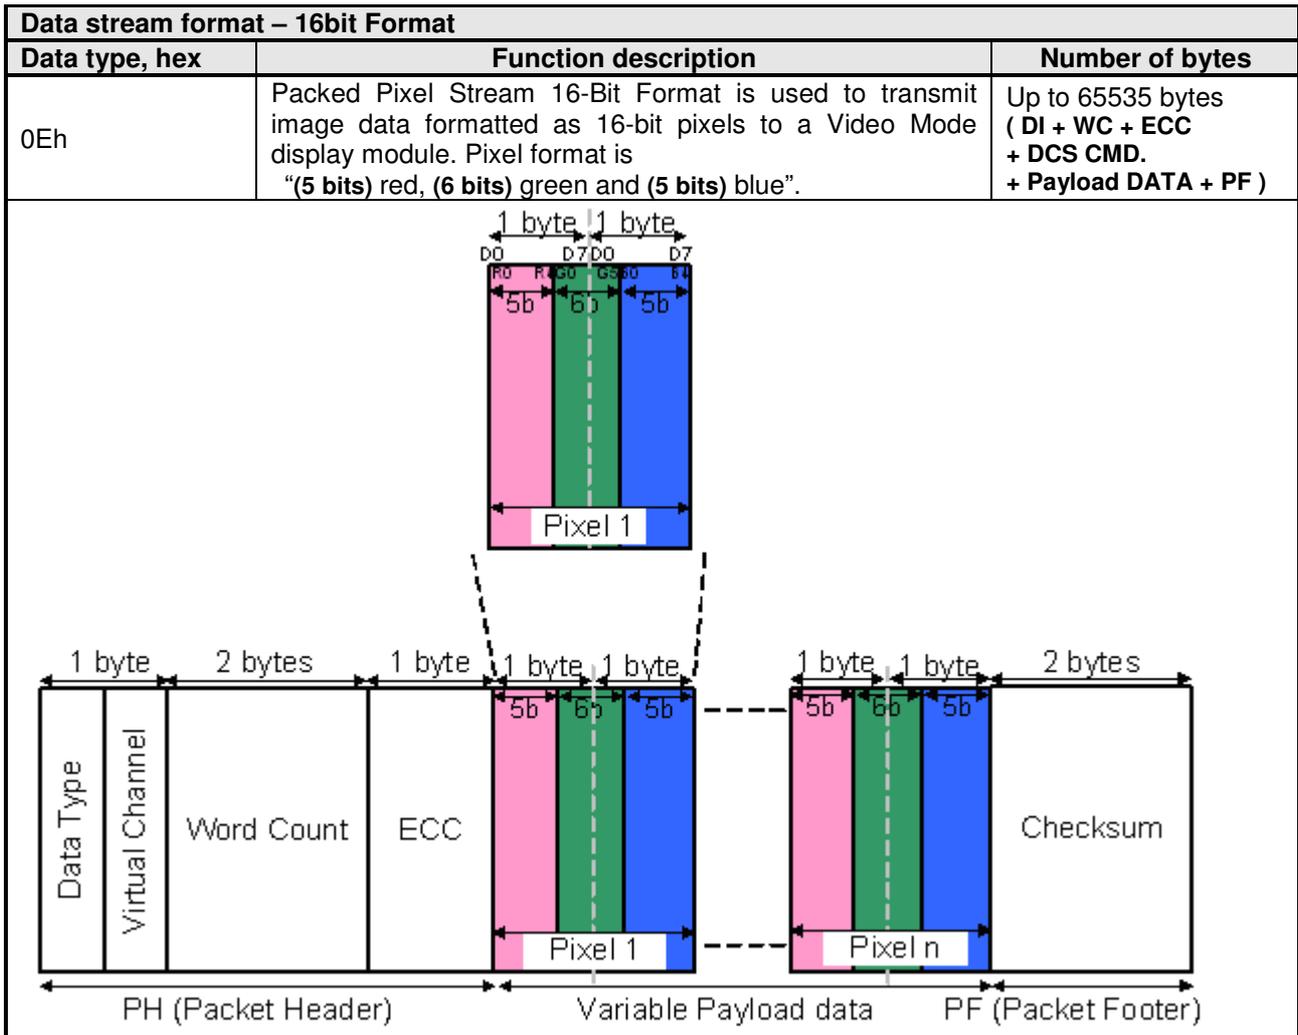

**Note:** (1) The two-byte value is transmitted with LS byte first. And during a power-on or Reset sequence, the Maximum Return Packet Size shall be set by the peripheral to a default value of one.

| Variable data packet |   |   |
|----------------------|---|---|
| Data type, hex       | Function description  | Number of bytes   |
| 09h                  | Null Packet is a mechanism for keeping the serial Data Lane(s) in High-Speed mode while sending dummy data. | Up to 65535 bytes<br>(DI + WC + ECC<br>+ DCS CMD.<br>+ Payload DATA + PF) |
| 19h                  | Blanking packet is used to convey blanking timing information in a Long packet.                             |   |

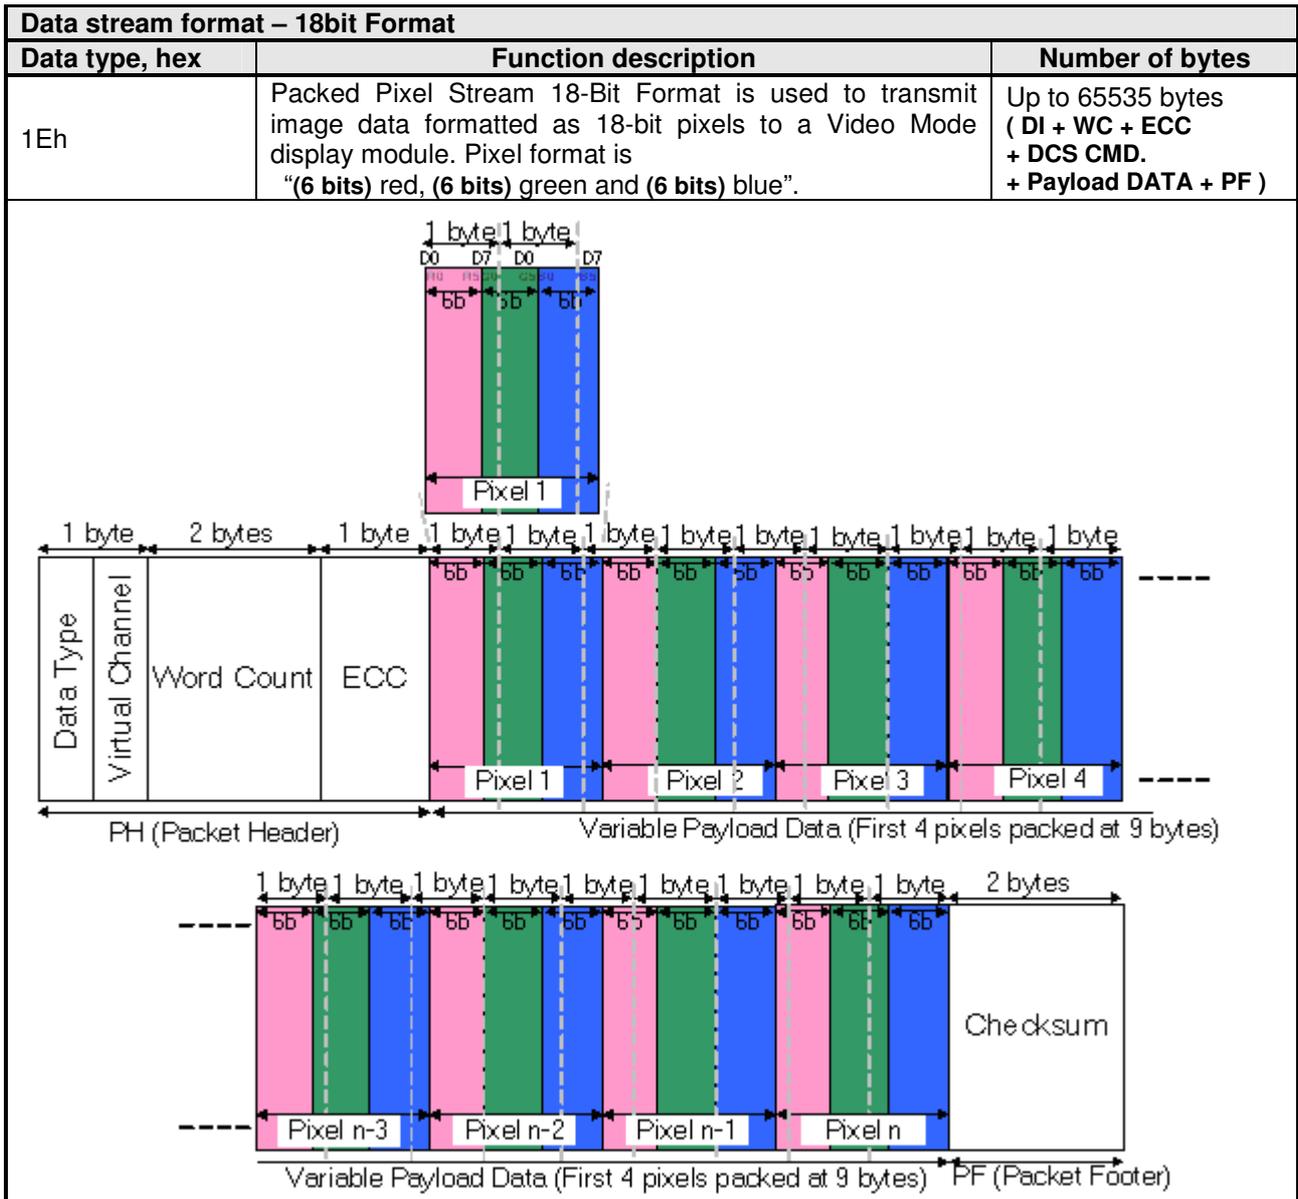

**Note:** (1) When Null Packet, the Payload Data belong "null" Data, actual data values sent are irrelevant because the peripheral does not capture or store the data.

(2) When Blanking packet, the packet represents a period between active scan lines of a Video Mode display.

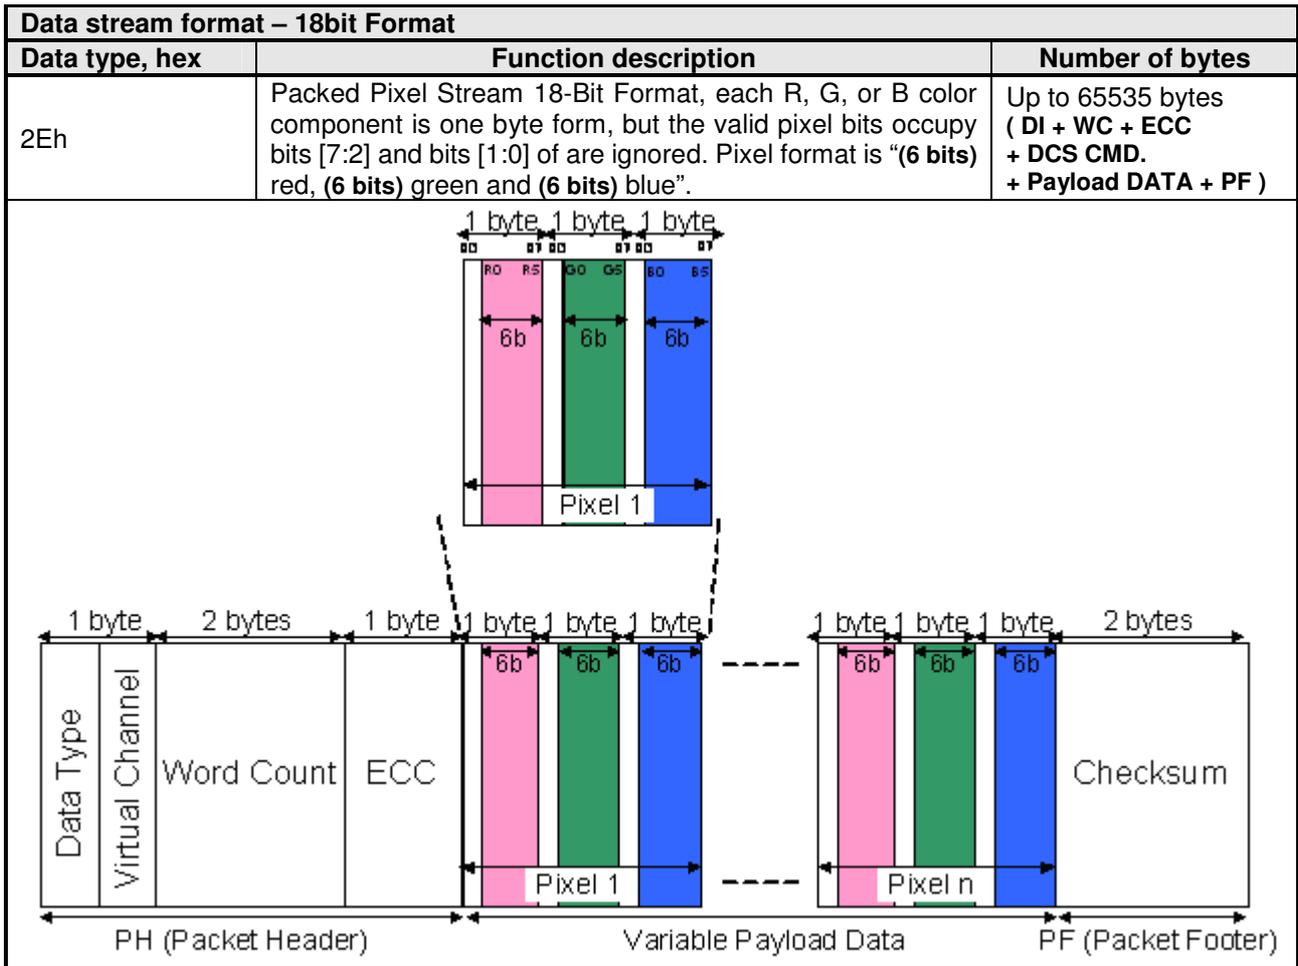

Himax Confidential  
Do Not Copy

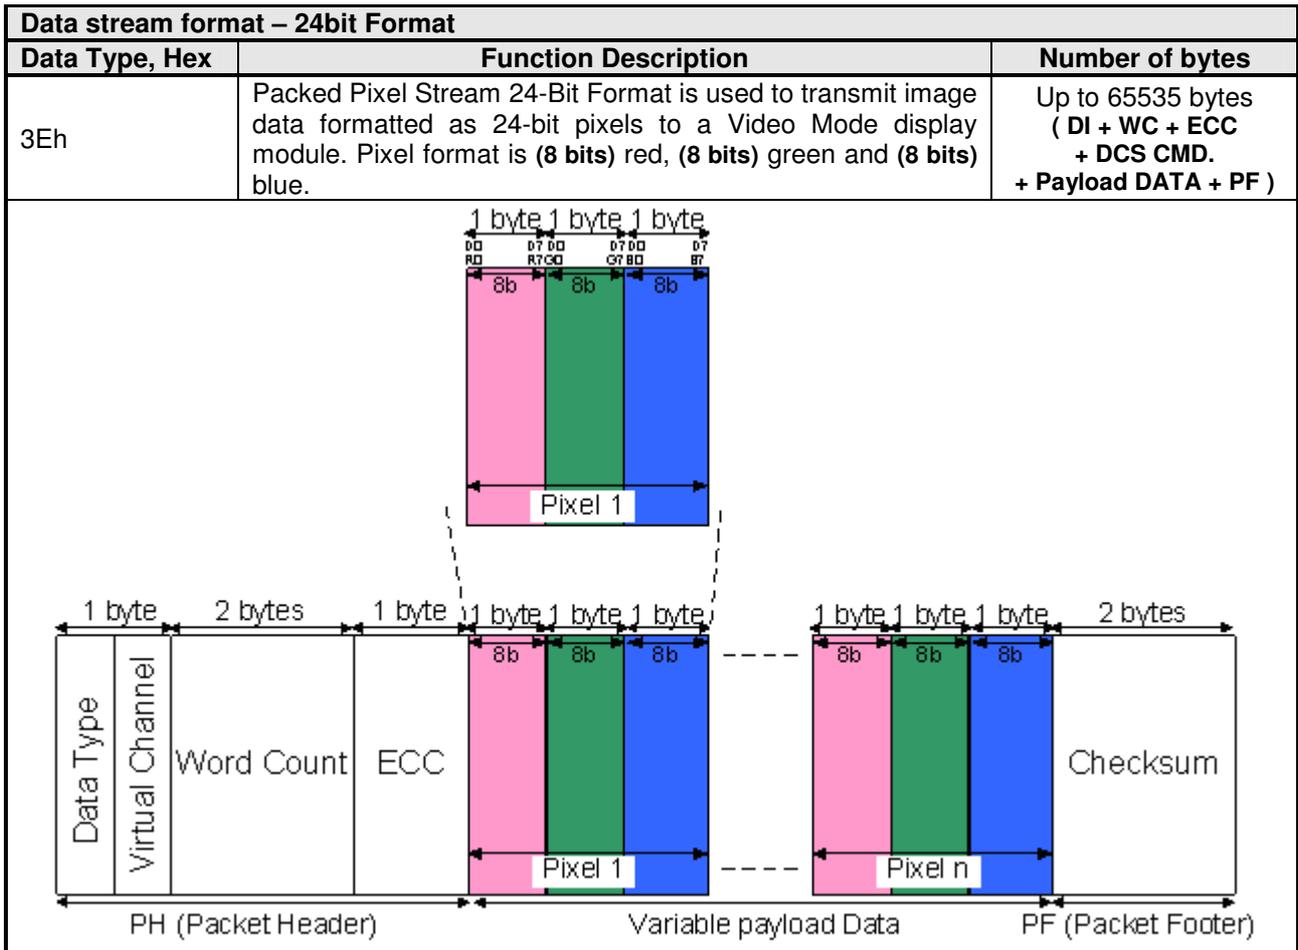

Note: (1) Within a color component, the “LSB is sent first, the MSB last”.

**Note:** (1) Within a color component, the LSB is sent first and the MSB last and pixel boundaries only line up with byte boundaries every four pixels (**nine bytes**). Preferably, display modules employing this format have a horizontal extent (**width in pixels**) evenly divisible by four, so no partial bytes remain at the end of the display line data. It is possible to send pixel data that represent a line width that is not a multiple of four pixels, but display logic on the receiver end shall dispose of the extra bits of the partial byte at the end of active display and ensure a “clean start” for the next line.

**Note:** (1) Within a color component, the LSB is sent first, the MSB last and With this format, pixel boundaries line up with byte boundaries every three bytes.

**Note:** (1) Within a color component, the LSB is sent first, the MSB last and With this format, pixel boundaries line up with byte boundaries every three bytes.

### 7.2.3 Peripheral to processor (reverse direction) packet data type

Table 7.3 present the complete set of peripheral-to-processor Data Types

| Data type, hex | Data type, binary | Description packet                            | Size  |
|----------------|-------------------|---|-------|
| 0x02           | 00 0010           | Acknowledge and error report.                 | Short |
| 0x08           | 00 1000           | End of transmission packet ( <b>EoTp</b> ).   | Short |
| 0x11           | 01 0001           | Generic short read response, 1 byte returned. | Short |
| 0x12           | 01 0010           | Generic short read response, 2 byte returned. | Short |
| 0x1A           | 01 1010           | Generic long read response.                   | Long  |
| 0x1C           | 01 1100           | DCS long read response.                       | Long  |
| 0x21           | 10 0001           | DCS short read response, 1 byte returned.     | Short |
| 0x22           | 10 0010           | DCS short read response, 2 byte returned.     | Short |

**Table 7.3: Data types for peripheral-sourced packets**

| Acknowledge types |  |                                      |
|-------------------|--|--------------------------------------|
| Data type, hex    | Function description   | Number of bytes                      |
| 02h               | Get Acknowledge with Error report when Error occurs from processor transmission. | 4 bytes<br>(DI + bit0 ~ bit15 + ECC) |

**Note:** (1) When processor transmits complete Payload, following signal by BTA, peripheral must respond to processor.  
 With error → Acknowledge with error report (**Short packet**). Without error → request READ data or Acknowledge (**trigger message**).

| Bit | Description  |
|-----|--|
| 0   | SoT error.   |
| 1   | SoT Sync error.  |
| 2   | EoT Sync error.  |
| 3   | Escape mode entry command error.                         |
| 4   | Low-power transmit Sync error.                           |
| 5   | Peripheral timeout error.                                |
| 6   | False control error.                                     |
| 7   | Contention detected.                                     |
| 8   | ECC error, single-bit ( <b>detected and corrected</b> ). |
| 9   | ECC error, multi-bit ( <b>detected, not corrected</b> ). |
| 10  | Checksum error ( <b>long packet only</b> ).              |
| 11  | DSI data type not recognized.                            |
| 12  | DSI VC ID invalid.                                       |
| 13  | Invalid transmission length.                             |
| 14  | Reserved.  |
| 15  | DSI protocol violation.                                  |

| Generic Short Read Response (1 byte returned) |  |                                  |
|---|--|----------------------------------|
| Data type, hex                                | Function description   | Number of bytes                  |
| 11h   | This is the short-packet to Generic Read Request. (1 byte returned). | 4 bytes<br>(DI + R1 + 00h + ECC) |

Note: (1) R1=returned byte 1.

| Generic Short Read Response (1 byte returned) |  |                                 |
|---|--|---------------------------------|
| Data type, hex                                | Function description   | Number of bytes                 |
| 12h   | This is the short-packet to Generic Read Request. (1 byte returned). | 4 bytes<br>(DI + R1 + R2 + ECC) |

Note: (1) R1=returned byte 1, R2=returned byte 2.

| Generic Long Read Response |  |   |
|----------------------------|--|---|
| Data type, hex             | Function description   | Number of bytes   |
| 1Ah                        | This is the long-packet response to Generic Long Read Request. | Up to 65535 bytes<br>( DI + WC + ECC + DCS<br>CMD. + Payload DATA +<br>PF ) |

Note: (1) If the peripheral is Checksum capable, is shall return a calculated two-byte Checksum appended to the N-byte payload data. If the peripheral does not support Checksum, it shall return 0000h.  
If the command itself is possibly corrupt, due to an uncorrectable ECC error, SoT or SoT Sync error, the requested READ data packet shall not be sent and only the Acknowledge with Error Report packet shall be sent.

| DCS Read Response |  |   |
|-------------------|--|---|
| Data type, hex    | Function description                                       | Number of bytes   |
| 1Ch               | This is the long-packet response to DCS Long Read Request. | Up to 65535 bytes<br>( DI + WC + ECC + DCS<br>CMD. + Payload DATA +<br>PF ) |

Note: (1) If the peripheral is Checksum capable, is shall return a calculated two-byte Checksum appended to the N-byte payload data. If the peripheral does not support Checksum, it shall return 0000h.  
If the DCS command itself is possibly corrupt, due to an uncorrectable ECC error, SoT or SoT Sync error, the requested READ data packet shall not be sent and only the Acknowledge with Error Report packet shall be sent.

| DCS Short Read Response (1 byte returned) |  |                                  |
|---|--|----------------------------------|
| Data type, hex                            | Function description   | Number of bytes                  |
| 21h                                       | This is the short-packet to DCS Read Request. (1 byte returned). | 4 bytes<br>(DI + R1 + 00h + ECC) |

Note: (1) R1=returned byte 1.

| DCS Short Read Response (2 byte returned) |  |                                 |
|---|--|---------------------------------|
| Data type, hex                            | Function description   | Number of bytes                 |
| 22h                                       | This is the short-packet to DCS Read Request. (2 byte returned). | 4 bytes<br>(DI + R1 + R2 + ECC) |

Note: (1) R1=returned byte 1, R2=returned byte 2.

### 7.3 Display command set (DCS)

| Command               | Hex Code | Description   | Number of parameters |
|-----------------------|----------|---|----------------------|
| Enter invert mode     | 21h      | Displayed image colors are inverted.  | 0                    |
| Enter sleep mode      | 10h      | Power for the display panel is off.   | 0                    |
| Exit invert mode      | 20h      | Displayed image colors are not inverted.  | 0                    |
| Exit sleep mode       | 11h      | Power for the display panel is on.  | 0                    |
| Get address mode      | 0Bh      | Get data order for transfers from the Host to the display module and from the frame memory to the display device.                                 | 1                    |
| Get display mode      | 0Dh      | Get the current display mode from the peripheral.   | 1                    |
| Get pixel format      | 0Ch      | Get the current pixel format.   | 1                    |
| Get power mode        | 0Ah      | Get the current power mode.   | 1                    |
| Get signal mode       | 0Eh      | Get display module signaling mode.  | 1                    |
| Nop                   | 00h      | No operation.   | 0                    |
| Read DDB continue     | A8h      | Continue reading the DDB from the last read location.   | variable             |
| Read DDB start        | A1h      | Read the DDB from the provided location.  | variable             |
| Set address mode      | 36h      | Set the data order for transfers from the host to the display module and from the frame memory to the display device.                             | 1                    |
| Set display off       | 28h      | Blanks the display device.  | 0                    |
| Set display on        | 29h      | Show the image on the display device.   | 0                    |
| Set pixel format      | 3Ah      | Defines how many bits per pixel are used in the interface.  | 1                    |
| Set tear off          | 34h      | Synchronization information is not sent from the display module to the host processor.  | 0                    |
| Set tear on           | 35h      | Synchronization information is sent from the display module to the host processor at the start of VFP   | 1                    |
| Set tear scan line    | 44h      | Synchronization information is sent from the display module to the host processor when the display device refresh reaches the provided scan line. | 2                    |
| Soft reset            | 01h      | Software Reset.   | 0                    |
| Enter_idle_mode       | 39h      | Reduced color depth is used on the display panel.   | 0                    |
| Exit_idle_mode        | 38h      | Full color depth is used on the display panel.  | 0                    |
| Get diagnostic_result | 0Fh      | Get Peripheral Self-Diagnostic Result.  | 1                    |
| RDNUMED               | 05h      | RDNUMED ( <b>Read Number of the Errors on DSI</b> ).  | 1                    |

**Table 7.4: DCS command list**

7.3.1 Enter\_invert\_mode (21h)

| 21 H                  | Enter_invert_mode (Display Inversion On)→INVON  |    |    |    |    |                       |    |    |    |     |
|-----------------------|---|----|----|----|----|-----------------------|----|----|----|-----|
|                       | Direction   | D7 | D6 | D5 | D4 | D3                    | D2 | D1 | D0 | HEX |
| Command               | H→D   | 0  | 0  | 1  | 0  | 0                     | 0  | 0  | 1  | 21  |
| Parameter             | No parameter.   |    |    |    |    |                       |    |    |    |     |
| Description           | This command is used to enter into display inversion mode.<br>This command makes no change of contents of frame memory. Every bit is inverted from the frame memory to the display.<br>This command does not change any other status. |    |    |    |    |                       |    |    |    |     |
|                       | (Example)<br>   |    |    |    |    |                       |    |    |    |     |
| Restriction           | This command has no effect when module is already in inversion on mode.   |    |    |    |    |                       |    |    |    |     |
| Register Availability | <b>Status</b>   |    |    |    |    | <b>Availability</b>   |    |    |    |     |
|                       | Sleep Out   |    |    |    |    | Yes                   |    |    |    |     |
|                       | Sleep In  |    |    |    |    | Yes                   |    |    |    |     |
| Default               | <b>Status</b>   |    |    |    |    | <b>Default value</b>  |    |    |    |     |
|                       | Power On Sequence   |    |    |    |    | Display Inversion Off |    |    |    |     |
|                       | S/W Reset   |    |    |    |    | Display Inversion Off |    |    |    |     |
|                       | H/W Reset   |    |    |    |    | Display Inversion Off |    |    |    |     |
| Flow Chart            | <pre>                     graph TD                         A([Invert mode off]) --&gt; B[enter_invert_mode]                         B --&gt; C([Invert mode on])                     </pre>   |    |    |    |    |                       |    |    |    |     |

7.3.2 Enter\_sleep\_mode (10h)

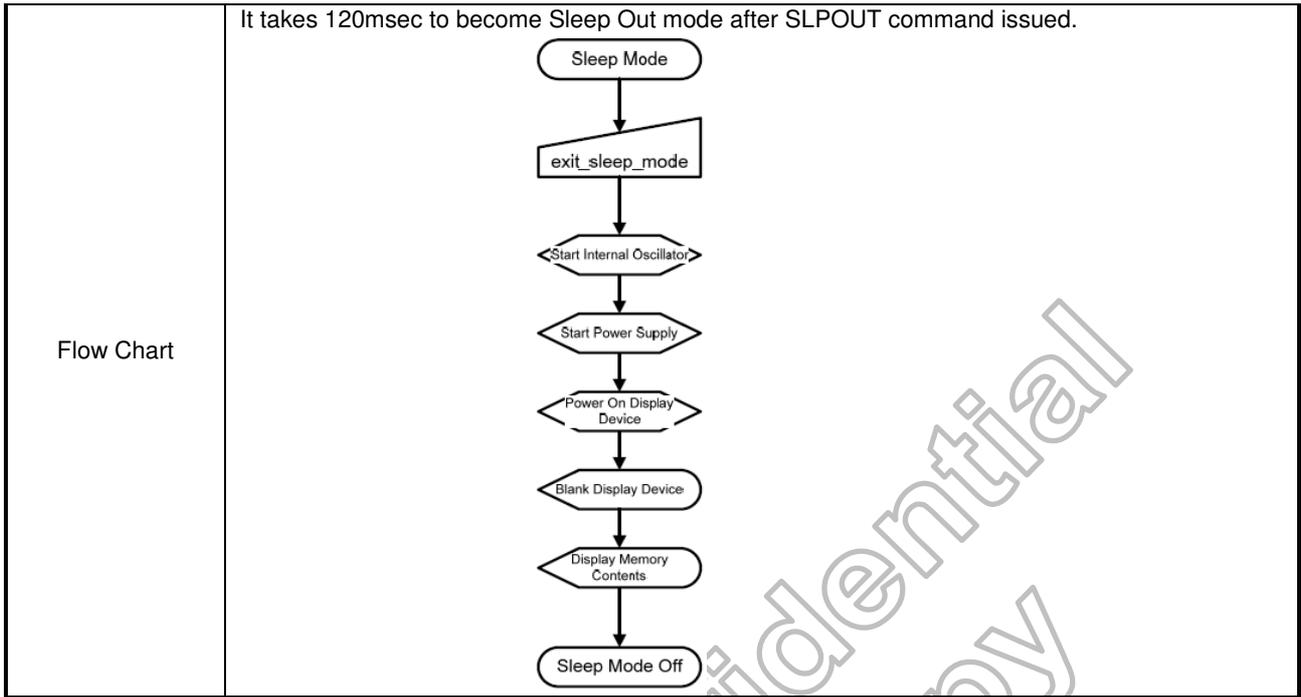

| 10 H                  | Enter_sleep_mode (Sleep In)→SLPIN  |    |    |    |    |        |    |                   |               |           |               |   |               |  |  |  |              |  |               |     |                   |               |           |               |           |               |
|-----------------------|--|----|----|----|----|--------|----|-------------------|---------------|-----------|---------------|---|---------------|--|--|--|--------------|--|---------------|-----|-------------------|---------------|-----------|---------------|-----------|---------------|
|                       | Direction  | D7 | D6 | D5 | D4 | D3     | D2 | D1                | D0            | HEX       |               |   |               |  |  |  |              |  |               |     |                   |               |           |               |           |               |
| Command               | H→D  | 0  | 0  | 0  | 1  | 0      | 0  | 0                 | 0             | 10        |               |   |               |  |  |  |              |  |               |     |                   |               |           |               |           |               |
| Parameter             | No parameter.  |    |    |    |    |        |    |                   |               |           |               |   |               |  |  |  |              |  |               |     |                   |               |           |               |           |               |
| Description           | <p>This command causes the LCD module to enter the minimum power consumption mode. In this mode the DC/DC converter is stopped, Internal oscillator is stopped, and panel scanning is stopped.</p> <p>MCU interface and memory are still working and the memory keeps its contents.</p>  |    |    |    |    |        |    |                   |               |           |               |   |               |  |  |  |              |  |               |     |                   |               |           |               |           |               |
| Restriction           | <p>This command has no effect when module is already in sleep in mode. Sleep In Mode can only be left by the Sleep Out Command (11h). It will be necessary to wait 5msec before sending next command, this is to allow time for the supply voltages and clock circuits to stabilize. It will be necessary to wait 120msec after sending Sleep Out command (when in Sleep In Mode) before Sleep In command can be sent.</p> |    |    |    |    |        |    |                   |               |           |               |   |               |  |  |  |              |  |               |     |                   |               |           |               |           |               |

| Parameter             | No parameter.   |    |    |    |    |    |    |    |    |     |        |               |                   |               |           |               |           |               |
| Description           | <p>This command turns off sleep mode. In this mode the DC/DC converter is enabled, Internal oscillator is started, and panel scanning is started.</p>   |    |    |    |    |    |    |    |    |     |        |               |                   |               |           |               |           |               |
| Restriction           | <p>This command has no effect when module is already in sleep out mode. Sleep Out Mode can only be left by the Sleep In Command (10h). It will be necessary to wait 5msec before sending next command, this is to allow time for the supply voltages and clock circuits to stabilize. The display module loads all display supplier's factory default values to the registers during this 5msec and there cannot be any abnormal visual effect on the display image if factory default and register values are same when this load is done and when the display module is already Sleep Out –mode. The display module is doing self-diagnostic functions during this 5msec. It will be necessary to wait 120msec after sending Sleep In command (<b>when in Sleep Out mode</b>) before Sleep Out command can be sent.</p> |    |    |    |    |    |    |    |    |     |        |               |                   |               |           |               |           |               |

| Description               | <p>The format of returned data is as follows:<br/>                     Parameter 1: LS (<b>least significant</b>) byte of Supplier ID. Supplier ID is a unique value assigned to each peripheral supplier by the MIPI organization.<br/>                     Parameter 2: MS (<b>most significant</b>) byte of Supplier ID.<br/>                     Parameter 3: LS (<b>least significant</b>) byte of Supplier Elective Data. This is a byte of information that is determined by the supplier. It could include model number or revision information, for example.<br/>                     Parameter 4: MS (<b>most significant</b>) byte of Supplier Elective Data<br/>                     Parameter 7: single-byte <i>Escape or Exit Code (EEC)</i>. The code is interpreted as follows:<br/>                     - FFh - Exit code – there is no more data in the Descriptor Block<br/>                     - 00h - Escape code – there is supplier-proprietary data in the Descriptor Block (<b>does not conform to any MIPI standard</b>)</p> |    |   |    |    |    |    |    |    |     |

Table 7.5: MIPI input video timing

## 8. Register table

The HX8260-A supports set internal register by MIPI interface and SPI interface. MIPI and SPI interface use different register address. The MSB bit [7] of address is only for MIPI interface. The SPI must be ignored its. "MIPI address" and "SPI address" showed in register table.

### 8.1 MIPI command mode control register

The HX8260-A supports the generic long write command to set internal register. User could use HS or LP mode to write internal register. Figure 8.1 showed the reference long package structure. There is a LP timing request between HS command to next HS command. This time needs more than 10usec as figure 8.1. Detail MIPI commands description showed in Section 8.4.

- Note:** (1) Data ID : Contain virtual channel identifier and data type.  
 (2) ECC (**Error Correction Code**) : The error correction code allows single-bit errors to be corrected and 2-bit errors to be detected in the short packet.

**Figure 8.1: Support the DSI data short write**

## 8.2 SPI format

The HX8260-A supports the 3-pin serial peripheral interface (SPI) to set internal register. The data is written to the register of assigned address when “End of transfer” is detected after the 16th SCL rising cycles.

Data is not accepted if there are less or more than 16 cycles for one transaction. Only when SCL is input 16 times and CSB is in the "Low" period simultaneously, SDA is accepted.

The first 7 bits (A6 ~ A0) specify the address of the register. The 8th bit means Read/Write command. “0” is WRITE. “1” is READ. The last 8 bits are for Data setting (D7 ~ D0). The address and data are transferred from the MSB to LSB sequentially. And next cycle is turn-round cycle.

For the MIPI mode 3-wire SPI pin are “MIPI\_CSB, MIPI\_SCK and MIPI\_SD”  
 For the LVDS mode 3-wire SPI pin are “LNSW\_CSB, PNSW\_SCL, MIPITE\_SDA”

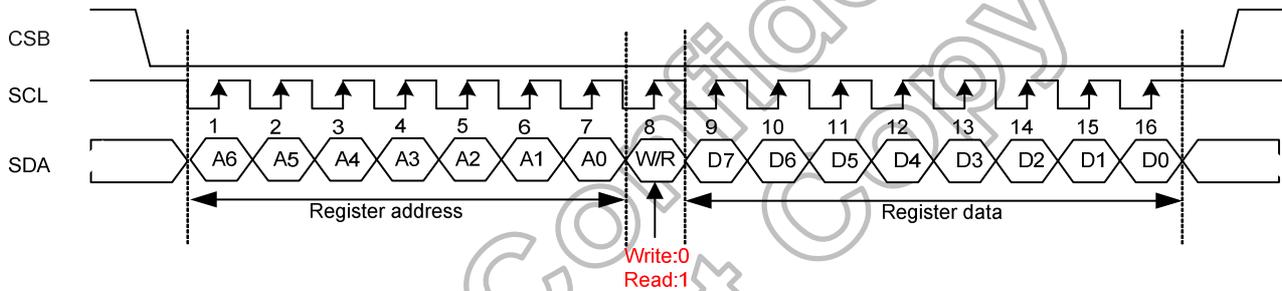

Figure 8.2: SPI format

### 8.3 Page change

The HX8260-A supports multi-page for register write. TCON have two path control register—SPI and MIPI. MIPI command has high priority than SPI.

| <b>DISP_ON:</b> MIPI DCS: 0x28 display on, 0x29 display off.<br>1: Reverse MIPI_DCS command (to MIPI_DCS command do "XOR" operation).<br>0: Follow MIPI_DCS command. |  |                           |            |               |              |                        |          |           |          |   |     |

**ZIGZAG\_SEL:** Panel driving method selection.

- 1: Zigzag type panel.
- 0: Strip panel.

**LR:** Horizontal direction select.

MIPI DCS 0x36 set\_address\_mode[6] command and SPI register do XOR operation.

**UPDNB:** Vertical direction select.

MIPI DCS 0x36 set\_address\_mode[7] command and SPI register do XOR operation.

**STB:** TCON sleep mode selection.

MIPI DCS 0x10 (**Enter sleep mode**), and 0x11 (**exit sleep mode**). MIPI DCS command do XOR with SPI register.

**RES[1:0]:** Resolution selection (**to pin HW RES do XOR operation**).

Resolution setting please refer section 6.1

**VRES\_FIX:** Display vertical Line decide by

- 1: RES[2:0].
- 0: VRES (**4th parameter**).

**PWRMD[1:0]:** POWR ON mode (**to pin PWRMD do XOR operation**).

| PWRMD[1] | PWRMD[0] | Driving mode                           |
|----------|----------|--|
| 0        | 0        | Support HX5186-C power mode            |
| 0        | 1        | Support PFM circuit power mode         |
| 1        | 0        | External VSP, VSN, VGH, VGL power mode |
| 1        | 1        | External VSP, VSN power mode           |

**ZTYPE\_SEL[1:0]:** Zigzag type selection (**panel type please refer section 6.3**).

**VRES [7:0]:** Vertical Resolution select, HX8260-A support user define vertical resolution.

User could enable the set **VRES\_FIX=1** and set VRES [7:0]. Range=80~ 253, step= 8H

**ZDATA [5:0]:** Setting ZigZag dummy data select.range 0~63

**HFRC\_EN:** Hi-FRC function enable.

- 1: HFRC enable.
- 0: HFRC disable.

**DITHER\_EN:** Dithering function enable.

- 1: Dithering enable.
- 0: Dithering disable.

**CABC\_CTRL[1:0]:** CABC-Mode selection:

| CABC_CTRL[1] | CABC_CTRL[0] | CABC Mode            |
|--------------|--------------|----------------------|
| 0            | 0            | Bypass Mode<default> |
| 0            | 1            | Still-Mode           |
| 1            | 0            | UI-Mode              |
| 1            | 1            | MovingI-Mode         |

**HFRC\_INV:** HI-FRC function inversion.

- 1: HFRC code 4, 9, 14 (**Default=1**).
- 0: HFRC code=241, 246, 251

**PNSW:** MIPI/LVDS pin change polarity (**to pin PNSW do XOR operation**).

- 1: P/N swap.
- 0: P/N follow pin name.

**LNSW[1:0]:** MIPI lane swap (**to pin LNSW do XOR operation**).

|         |         | D2P                      | D2N | D1P | D1N | CLKP | CLKN | D0P | D0N | D3P | D3N |
|---------|---------|--------------------------|-----|-----|-----|------|------|-----|-----|-----|-----|
| LNSW[1] | LNSW[0] | MIPI lanes mapping table |     |     |     |      |      |     |     |     |     |
| 0       | 0       | D3P                      | D3N | D2P | D2N | CLKP | CLKN | D1P | D1N | D0P | D0N |

| 1       | 0       | D0P                      | D0N | D1P | D1N | CLKP | CLKN | D2P | D2N | D3P | D3N |
| 1       | 1       | D2P                      | D2N | D1P | D1N | CLKP | CLKN | D0P | D0N | D3P | D3N |

**LVDS\_FMT:** LVDS data format selection.  
 1: Thine or VESA format.  
 0: NS or JEIDA format.

**LVDS\_VB[1:0]:** LVDS DLL bias current selection.

| LVDS_VB[1] | LVDS_VB[0] | LVDS DLL bias current |
|------------|------------|-----------------------|
| 0          | 0          | 82%                   |
| 0          | 1          | 100% (default)        |
| 1          | 0          | 137%                  |
| 1          | 1          | 160%                  |

**LVDS\_RX[1:0]:** LVDS bias current selection.

| LVDS_RX[1] | LVDS_RX[0] | LVDS bias current |
|------------|------------|-------------------|
| 0          | 0          | 75%               |
| 0          | 1          | 100% (default)    |
| 1          | 0          | 125%              |
| 1          | 1          | 150%              |

**RX\_DINT:** LVDS 8/6 bit mode.  
 1: 8bit mode.  
 0: 6 bit mode.

**PCLK\_SEL:** TCON PCLK source selection.  
 1: From EXT\_CLK.  
 0: Fome internal OSC25M.

**LVDS\_TC[2:0]:** LVDS\_TC skew tuning for LVDS Clock lanes 1setp delay 0.18 nsec.  
**LVDS\_TD[2:0]:** LVDS\_TC skew tuning for LVDS Data lanes 1setp delay 0.18 nsec.

**LVDS\_CPB[2:0]:** LVDS DLL pump current selection.  
 $I=20u*CPB[2]+10u*CPB[1]+5u*CPB[0]$

**LVDS\_BW[1:0]:** LVDS DLL bandwidth selection.

| LVDS_BW[1] | LVDS_BW[0] | LVDS bias current |
|------------|------------|-------------------|
| 0          | 0          | 100%              |
| 0          | 1          | 91% (default)     |
| 1          | 0          | 83%               |
| 1          | 1          | 77%               |

**INV\_SEL[2:0]:** Normal mode POL inversion type selection (for strip panel only).

| INV_SEL[2] | INV_SEL[1] | INV_SEL[0] | Inversion tpye   |
|------------|------------|------------|------------------|
| 0          | 0          | 0          | line inversion   |
| 0          | 0          | 1          | 2-line inversion |
| 0          | 1          | 0          | 4-line inversion |
| 0          | 1          | 1          | column inversion |
| 1          | 0          | 0          | 8-line inversion |

**SD\_ISSEL[1:0]:** Source output bias current selection.

**BLREV[1:0]:** Source output status at V-blanking.  
 00:SD keep output the last line.  
 01: Hi-Z.  
 1X: GND.

**LNSEL[1:0]:** MIPI lane number control. The register do XOR with LANE1\_STBYB & LANE0\_BISTB pin.

**DPFM\_OSC\_SEL[1:0]:** DPFM clock selection (for BIST mode use).

| DPFM_OSC_SEL[1] | DPFM_OSC_SEL[0] | DPFM frequency |
|-----------------|-----------------|----------------|
| 0               | 0               | 6.25MHz        |
| 0               | 1               | 12.5MHz        |
| 1               | 0               | 25MHz          |
| 1               | 1               | 25MHz          |

**RB\_SWAP:** Red and Blue color swap.  
1: R/B swap.  
0: Non-swap.

**GOA\_EN:** GOA signals enable.  
1: Enable.  
0: Disable.

**BC\_CTRL:** H/W pin BC\_CTRL control.

**GCHL\_Blanking:** CLR power on status selection.  
1: CLR1 =GND, CLR2=High level ,when power on status.  
0: CLR1/2 =GND, when power on status.

**VRES\_BLACK:** when user change VRES register, TCON will send two black pattern.  
1: Enable.  
0: Disable.

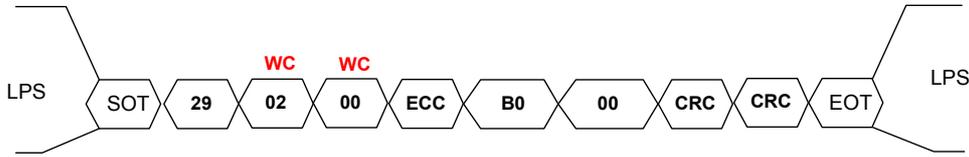

**GAS\_GOA\_EN:** when enable gas function, GOA CKV/STV pulled to high level.  
1: Enable.  
0: Disable.

**T\_OFFSET:** PFM ton / toff time offset.

1: Enable.  
0: Disable.

**PFMFREN:** enable frequency randomizer of both VDDP and VDDN PFM

1: Enable.  
0: Disable.

**VGXSP[1:0]:** VGL boost function selection.

00: NC  
01: 2VSP+(-VSN).  
1x: NC

**VGLXSP:** VGL boost function selection.

1: 2VSN-VSP.  
0: NC.

**VPHS [4:0]:** Positive gamma\_H selection.

| VPHS [4:0] | Voltage        |
|------------|----------------|
| 00000      | 4              |
| 00001      | 4.05V          |
| 00010      | 4.1V           |
| ⋮          | ⋮              |
| 00100      | 4.2V (default) |
| ⋮          | ⋮              |
| 11111      | 5.5V           |

**CMD\_SEL[1:0]:** Power mode 00: charge Pump command selection.

| CMD_SEL[1] | CMD_SEL[0] | Pump command |
|------------|------------|--------------|
| 0          | 0          | x1.5         |
| 0          | 1          | x2 (default) |
| 1          | 0          | x3           |
| 1          | 1          | x3           |

**CLK\_SEL[2:0]:** Power mode 00: charge Pump frequency selection.

| CLK_SEL[2:0] | Frequency        |
|--------------|------------------|
| 000          | 403kHz           |
| 001          | 595kHz           |
| 010          | 781 kHz          |
| 011          | 963kHz (default) |
| 100          | 1136 kHz         |
| 101          | 1389kHz          |
| 110          | 1786kHz          |
| 111          | 2083kHz          |

**SOFT\_EN:** Power mode 00: Charge Pump soft start enable.

1: Enable.  
0: Disable.

**CGPP\_INV[1:0]:** Power mode 00 charge pump output signal invert.

CGPP\_INV [1] set the DRVN signal, CGPP\_INV [0] set the DRVP signal.  
1: Invert.  
0: Non-invert.

**VNHS[4:0]:** Negative gamma high selection.

| VNHS [4:0] | Voltage |
|------------|---------|
| 00000      | -4      |
| 00001      | -4.05V  |
| 00010      | -4.1V   |

|       |                 |
|-------|-----------------|
| ⋮     | ⋮               |
| 00100 | -4.2V (default) |
| ⋮     | ⋮               |
| 11111 | -5.5V           |

**VGH\_CPCTL[1:0]:** VGH charge pump clock frequency selection.

**VGL\_CPCTL[1:0]:** VGH charge pump clock frequency selection.

**VCL\_CPCTL[1:0]:** VGH charge pump clock frequency selection.

| CPCTL[1] | CPCTL[0] | Pump frequency (unit:line frequency) |
|----------|----------|--------------------------------------|
| 0        | 0        | x1                                   |
| 0        | 1        | x2 (default)                         |
| 1        | 0        | x4                                   |
| 1        | 1        | x8                                   |

**EQ0W[5:0]:** Source EQ0 time setting.

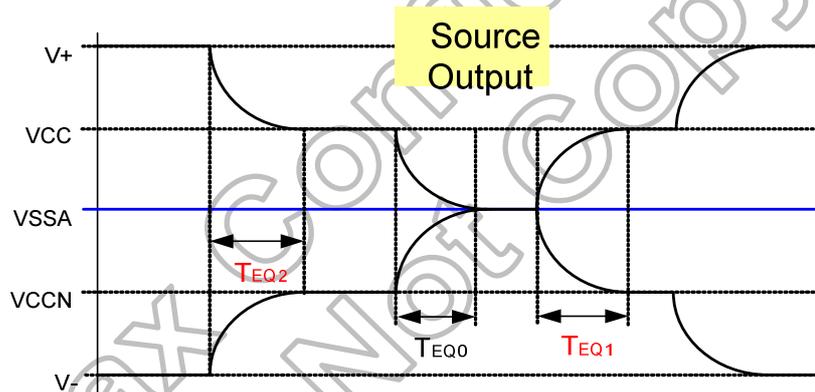

TEQ0=EQ0W[4:0]x4 DCLK (Min is 12DCLK).

**EQ1W[4:0]:** Source EQ1 time setting.

TEQ1=EQ1W[4:0]x4 DCLK.

**EQ2W[4:0]:** Source EQ1 time setting.

TEQ2=EQ2W[4:0]x4 DCLK (TEQ2≤TOEV-22DCLK satisfies gate driver settle time).

**POCSO\_CTL[1:0]:** Source output offset cancel method selection.

### 8.5.4 Registers of Page3 (GOA)

GOA register setting please refers Application Note.

### 8.5.5 Registers of Page4 (CABC)

| MIPI address | SPI address | Default | Bit name   | Data            | Description                 | Group |
|--------------|-------------|---------|------------|-----------------|-----------------------------|-------|
| 0xB1         | 0x31        | 3Bh     | DIM_EN     | - - 1 - - - - - | Dimming function enable.    | 5     |
|              |             |         | BL_EN      | - - - 1 - - - - | Blacklight enable.          |       |
|              |             |         | PWM_POL    | - - - - 1 - - - | PWM output polarity select. |       |
|              |             |         | CABC_AGAIN | - - - - - - 1 - | CABC block aging enable.    |       |
| 0xB2         | 0x32        | 09h     | DIM_STEP   | - - - - 1 0 - - | Dimming step setting.       |       |
|              |             |         | DIM_FRME   | - - - - - - 0 1 | Dimming cycle setting.      |       |
| 0xB3         | 0x33        | FFh     | DUTY_UD    | 1 1 1 1 1 1 1 1 | Bypass mode duty setting.   |       |
| 0xB4         | 0x34        | 10h     | CABC_MB    | 0 0 0 1 0 0 0 0 | Minimum duty constraint.    |       |
| 0xB5         | 0x35        | 00h     | PWM_PRD    | 0 0 0 0 0 0 0 0 | PWM period setting.         |       |
| 0xB6         | 0x36        | 02h     | PWM_DIV    | - - - - - 0 1 0 | PWM period divider setting. |       |
| 0xB8         | 0x38        | FFh     | MAX_DUTY   | 1 1 1 1 1 1 1 1 | CABC max duty.              |       |

### 8.5.6 Registers of Page6 (MIPI)

| MIPI address | SPI address   | Default   | Bit name         | Data            | Description   | Group |
|--------------|---------------|---|------------------|-----------------|---|-------|
| 0xB1         | 0x31          | E0h   | EoTp_EN          | 1 - - - - - - - | Process of EoT packet enable.                       | 6     |
|              |               |   | CRCEN            | - 1 - - - - - - | CRC check enable.                                   |       |
|              |               |   | CRCErr_FilterOut | - - 1 - - - - - | Filter-out by CRC check result enable.              |       |
|              |               |   | VC4FRAME         | - - - 0 - - - - | RX virtual channel filtering mode.                  |       |
|              |               |   | VC_S             | - - - - 0 0 - - | virtual channel ID setting of slave (for LP/HS rx). |       |
| VC_m         | - - - - - 0 0 | virtual channel ID setting of master (for LP tx). |                  |                 |   |       |
| 0xB5         | 0x35          | 55h   | RT3              | - 1 0 1 - - - - | Lane3 termination resistance control.               | 8     |
|              |               |   | RT2              | - - - - - 1 0 1 | Lane2 termination resistance control.               |       |
| 0xB6         | 0x36          | 55h   | RT1              | - 1 0 1 - - - - | Lane1 termination resistance control.               |       |
|              |               |   | RT0              | - - - - - 1 0 1 | Lane0 termination resistance control.               |       |
| 0xB7         | 0x37          | 05h   | TurnDisable      | 0 - - - - - - - | BTA→TX procedure function enable.                   |       |
|              |               |   | RTC              | - - - - - 1 0 1 | Clock lane termination resistance control.          |       |

## 9. Register Description (for LVDS input SPI mode)

### 9.1 Registers of Page0

- Address is 0xB1

| Bit #       | B7  | B6 | B5 | B4 | B3 | B2 | B1 | B0 | OTP |
|-------------|---|----|----|----|----|----|----|----|-----|
| Name        | VCOMS   |    |    |    |    |    |    |    | V   |
| Description | VCOM voltage select (step=10mV) (OTP 3 times) |    |    |    |    |    |    |    |     |
| Default     | 1   | 0  | 0  | 0  | 0  | 0  | 0  | 0  |     |

| VCOMS[7:0] | VCOM Voltage     |
|------------|------------------|
| 00000000   | -0.2V            |
| 00000001   | -0.21V           |
| 00000010   | -0.22V           |
| ⋮          | ⋮                |
| 10000000   | -1.48V (default) |
| ⋮          | ⋮                |
| 11111111   | -2.75V           |

- Address is 0xB2

| Bit #   | B7 | B6  | B5    | B4 | B3         | B2      | B1      | B0   | OTP |
|---------|----|-----|-------|----|------------|---------|---------|------|-----|
| Name    | NA | STB | UPDNB | LR | ZIGZAG_SEL | DISP_ON | NBW_SEL | BIST | V   |
| Default | 0  | 1   | 0     | 0  | 1          | 0       | 1       | 1    |     |

| Bit | Item       | Description   |
|-----|------------|---|
| 6   | STB        | TCON sleep mode selection. MIPI DCS 0x10 (Enter sleep mode), and 0x11 (exit sleep mode). MIPI DCS command do XOR with SPI register.                 |
| 5   | UPDNB      | Vertical direction selection. MIPI DCS 0x36 set_address_mode[7] command and SPI register do XOR operation.  |
| 4   | LR         | Horizontal direction selection. MIPI DCS 0x36 set_address_mode[6] command and SPI register do XOR operation.  |
| 3   | ZIGZAG_SEL | Panel driving method selection. 0:Strip panel , 1:Zigzag type panel   |
| 2   | DISP_ON    | MIPI DCS: 0x28 display on, 0x29 display off<br>0: Follow MIPI DCS command.<br>1: Reverse MIPI DCS command. (to MIPI DCS command do "XOR" operation) |
| 1   | NBW_SEL    | Normal Black and Normal white panel selection. 0:Normally white , 1:Normally black  |
| 0   | BIST       | TCON bist mode selection. 0:BIST mode , 1:Normal mode   |

- Address is 0xB3

| Bit #   | B7           | B6           | B5       | B4       | B3       | B2 | B1     | B0     | OTP |
|---------|--------------|--------------|----------|----------|----------|----|--------|--------|-----|
| Name    | ZTYPE_SEL[1] | ZTYPE_SEL[0] | PWRMD[1] | PWRMD[0] | VRES_FIX | NC | RES[1] | RES[0] | V   |
| Default | 0            | 0            | 1        | 0        | 1        | 0  | 0      | 0      |     |

| Bit | Item         | Description   |          |                                |              |   |   |                             |   |   |                                |   |   |   |   |   |                             |
|-----|--------------|---|----------|--------------------------------|--------------|---|---|-----------------------------|---|---|--------------------------------|---|---|---|---|---|-----------------------------|
| 7   | ZTYPE_SEL[1] | Zigzag type selection ( <b>panel type please refer section 6.3</b> ).   |          |                                |              |   |   |                             |   |   |                                |   |   |   |   |   |                             |
| 6   | ZTYPE_SEL[0] | 0: Zigzag type 0 , 1: Zigzag type 1 2:Zigzag type 2 3:Zigzag type3  |          |                                |              |   |   |                             |   |   |                                |   |   |   |   |   |                             |
| 5   | PWRMD[1]     | POWR ON mode ( <b>to pin PWRMD do XOR operation</b> ).  |          |                                |              |   |   |                             |   |   |                                |   |   |   |   |   |                             |
| 4   | PWRMD[0]     | <table border="1"> <thead> <tr> <th>PWRMD[1]</th> <th>PWRMD[0]</th> <th>Driving mode</th> </tr> </thead> <tbody> <tr> <td>0</td> <td>0</td> <td>Support HX5186-C power mode</td> </tr> <tr> <td>0</td> <td>1</td> <td>Support PFM circuit power mode</td> </tr> <tr> <td>1</td> <td>0</td> <td>External VSP,VSN, VGH,VGL power mode(<b>default</b>).</td> </tr> <tr> <td>1</td> <td>1</td> <td>External VSP,VSN power mode</td> </tr> </tbody> </table> | PWRMD[1] | PWRMD[0]                       | Driving mode | 0 | 0 | Support HX5186-C power mode | 0 | 1 | Support PFM circuit power mode | 1 | 0 | External VSP,VSN, VGH,VGL power mode( <b>default</b> ). | 1 | 1 | External VSP,VSN power mode |
|     |              | PWRMD[1]  | PWRMD[0] | Driving mode                   |              |   |   |                             |   |   |                                |   |   |   |   |   |                             |
|     |              | 0   | 0        | Support HX5186-C power mode    |              |   |   |                             |   |   |                                |   |   |   |   |   |                             |
|     |              | 0   | 1        | Support PFM circuit power mode |              |   |   |                             |   |   |                                |   |   |   |   |   |                             |
| 1   | 0            | External VSP,VSN, VGH,VGL power mode( <b>default</b> ).   |          |                                |              |   |   |                             |   |   |                                |   |   |   |   |   |                             |
| 1   | 1            | External VSP,VSN power mode   |          |                                |              |   |   |                             |   |   |                                |   |   |   |   |   |                             |
| 3   | VRES_FIX     | Display vertical Line decide by(1):RES[2:0] or (0) VRES ( <b>Register 0xB4</b> )  |          |                                |              |   |   |                             |   |   |                                |   |   |   |   |   |                             |
| 1   | RES[1]       | Resolution selection ( <b>to pin HW RES do XOR operation</b> ).   |          |                                |              |   |   |                             |   |   |                                |   |   |   |   |   |                             |
| 0   | RES[0]       | Resolution setting please refer section 6.1   |          |                                |              |   |   |                             |   |   |                                |   |   |   |   |   |                             |

- Address is 0xB4

| Bit #       | B7   | B6 | B5 | B4 | B3 | B2 | B1 | B0 | OTP |

- Address is 0xBE

**VGHS:**

The VGH output voltage follows VSP and VSN setting as following formula:

**$VGH=2VSP+ (-VSN).$**

- Address is 0xBF

## 10. Function Description

### 10.1 BIST pattern

When register BIST\_EN is trigger to high, then HX8260-A will leave normal operation mode and starts to generate the BIST pattern to LCD panel without MIPI input signals.

The BIST pattern is illustrated as below figure.

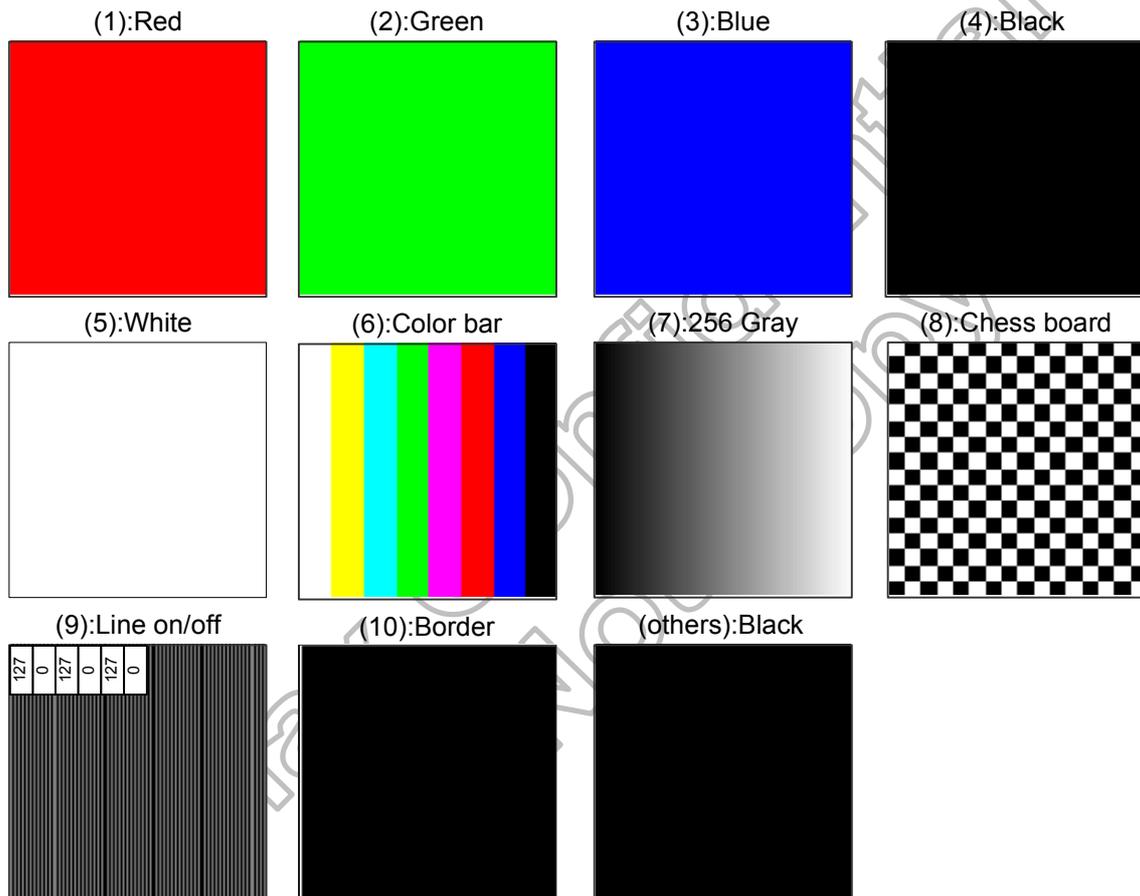

Figure 10.1: Bist pattern loop

### 10.2 CABC Function

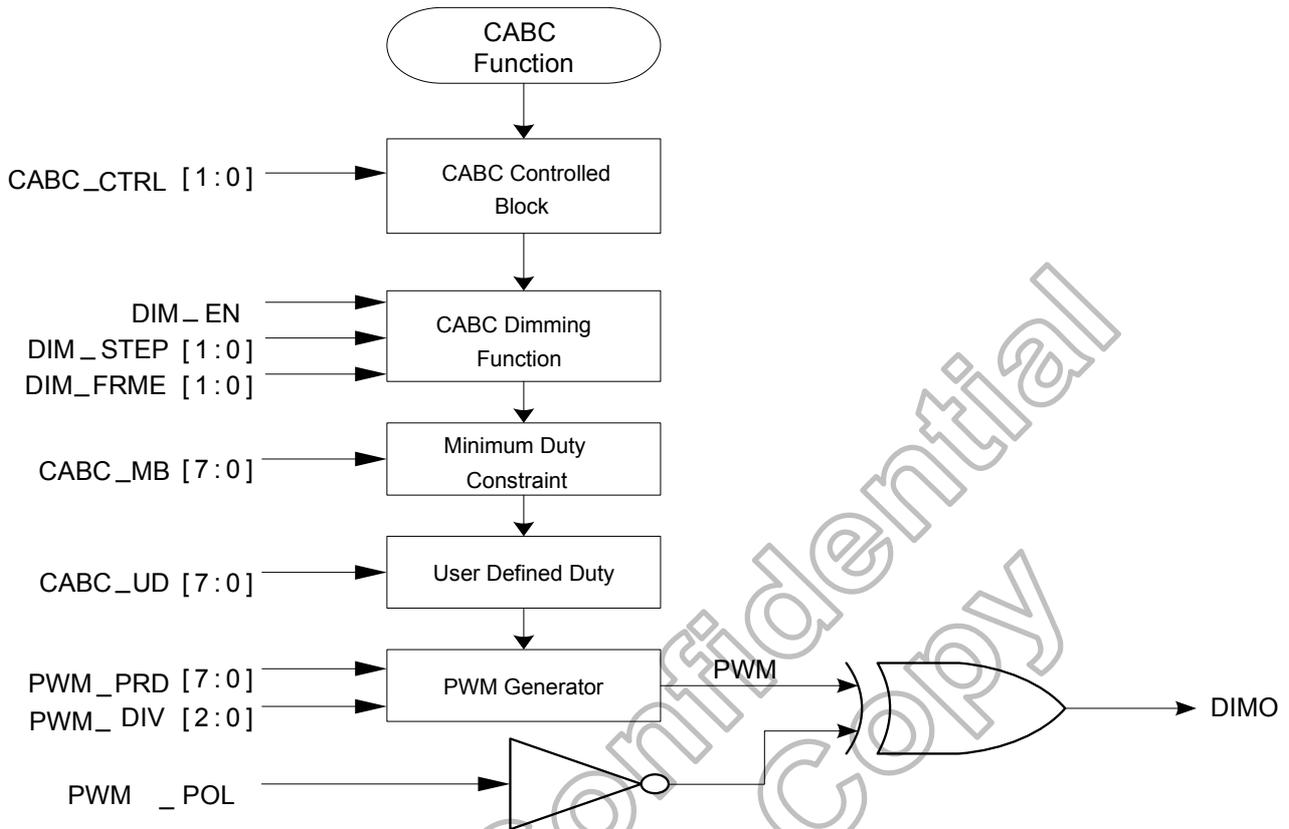

Figure 10.2: CABC flow chart

CABC controlled register:

- CABC\_EN: CABC enable/ disable switch
- CABC\_CTRL[1:0]: UI / Still / Moving / Bypass mode selection
- CABC\_MB[7:0]: Minimum PWM duty constraint
- DUTY\_UD[7:0]: Fixed PWM duty by user-defined when operating on Bypass mode
- PWM\_POL: PWM duty polarity selection
- BL\_EN: back-light On/ Off switch
- DIM\_EN: Dimming function enable/ disable switch
- Dimming time selection : DIM\_STEP[1:0] / DIM\_FRME[1:0]
  - Total dimming time = DIM\_STEP[1:0] × DIM\_FRME[1:0]
- PWM duty frequency selection : PWM\_PRD[7:0] / PWM\_DIV[2:0]
  - PWM output period = CLK period × 256 × (PWM\_PRD[7:0]) / (PWM\_DIV[2:0] + 1)

### 10.3 OTP function

#### 10.3.1 OTP flow of programming and read

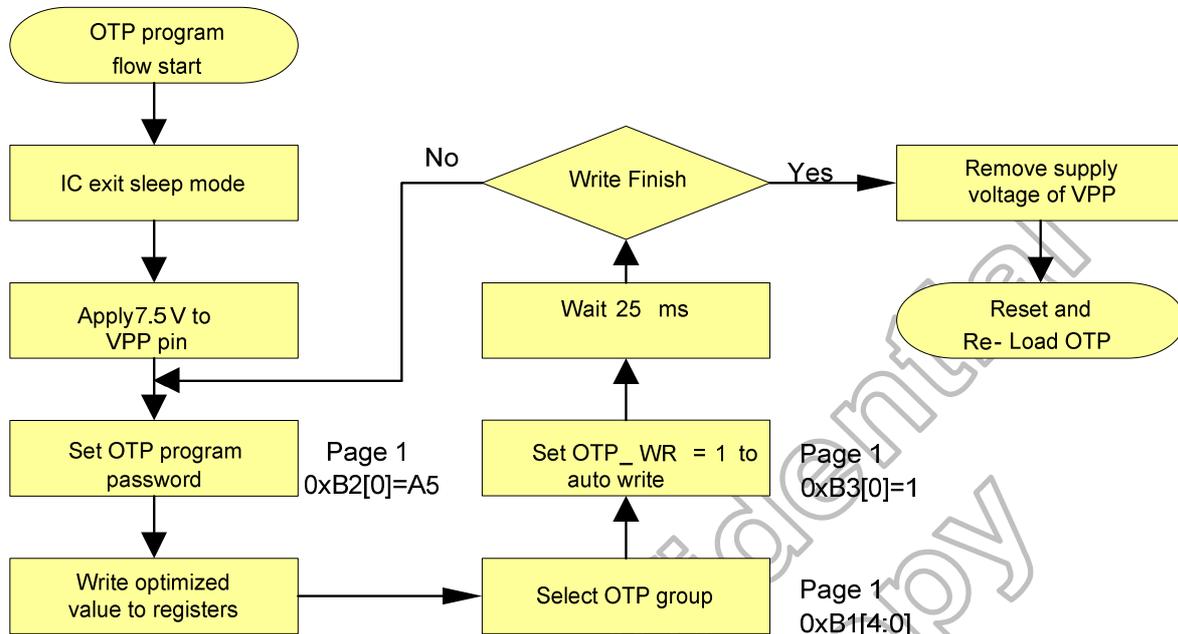

Figure 10.3: OTP program flow

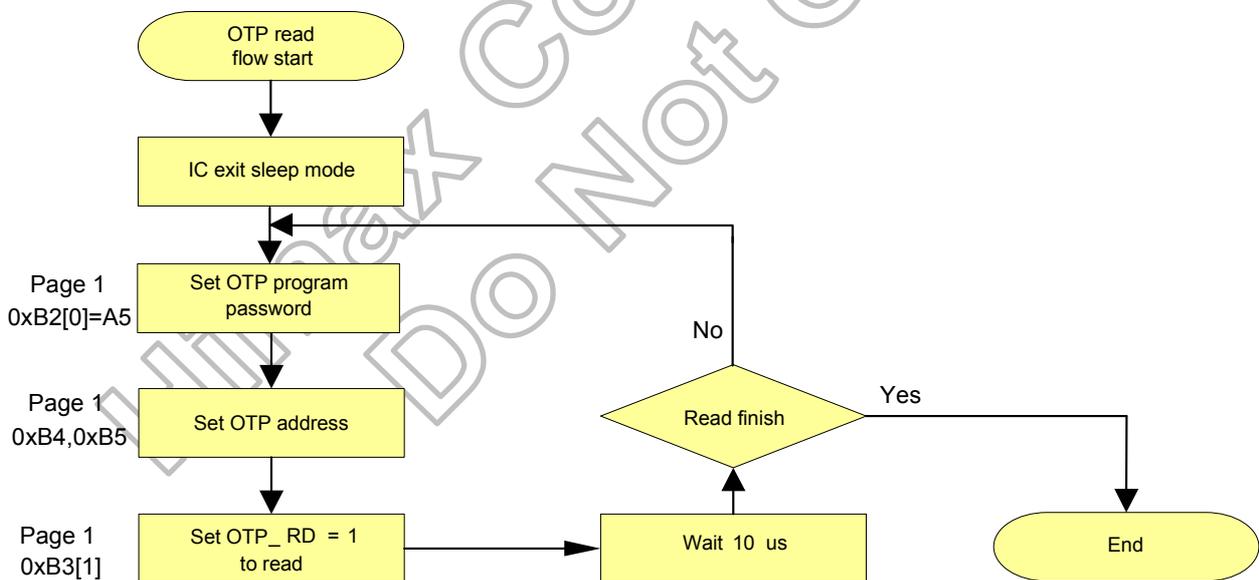

Figure 10.4: OTP read flow

#### 10.4 No signal detect function

HX8260-A keeps detect input signals (**HS**, **VS**) for MIPI mode input and DCLK for LVDS mode input. If detecting of signals is missing, HX8260-A will enter no signal mode.

No signal mode:

- A. All GOA signals will keep running.
- B. Keep PFM and charge pump running.
- C. Panel display will show black pattern.

### 10.5 GAS function

When power is removed from an electronic device during display, the image still keeps on the LCD panel for a long time. GAS function can speed the process that image disappears.

The GAS function is a voltage detector. By GAS circuit, HX8260 can detect low voltage of power and send control signal to discharge residual potential in LCD panel and remove image.

In any one of the following case, the chip will entry GAS function.

- A. VCI is lower than 2V (Case 1)
- B. VSP is lower than 3V (Case 2)

GAS function:

- A. Source output pull to VSSA.
- B. All GOA signals will be set to gas mode (setting by register).
- C. Stop PFM and charge pump function.
- D. VCOM output pull to VSSA.

The GAS function has debounce protection circuit. EX: If the duration of voltage drop on VCI is less than 20us (Ex: induced by ESD pulse), the GAS function will not be active even the VCI voltage level is less than 2V.

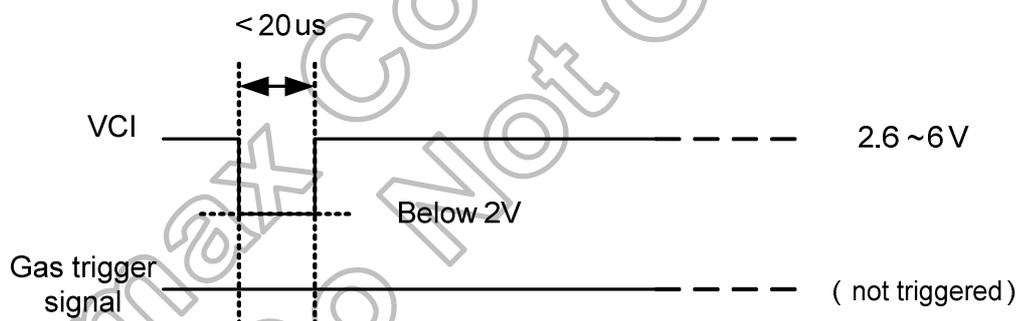

Figure 10.5: GAS function vs. VCI

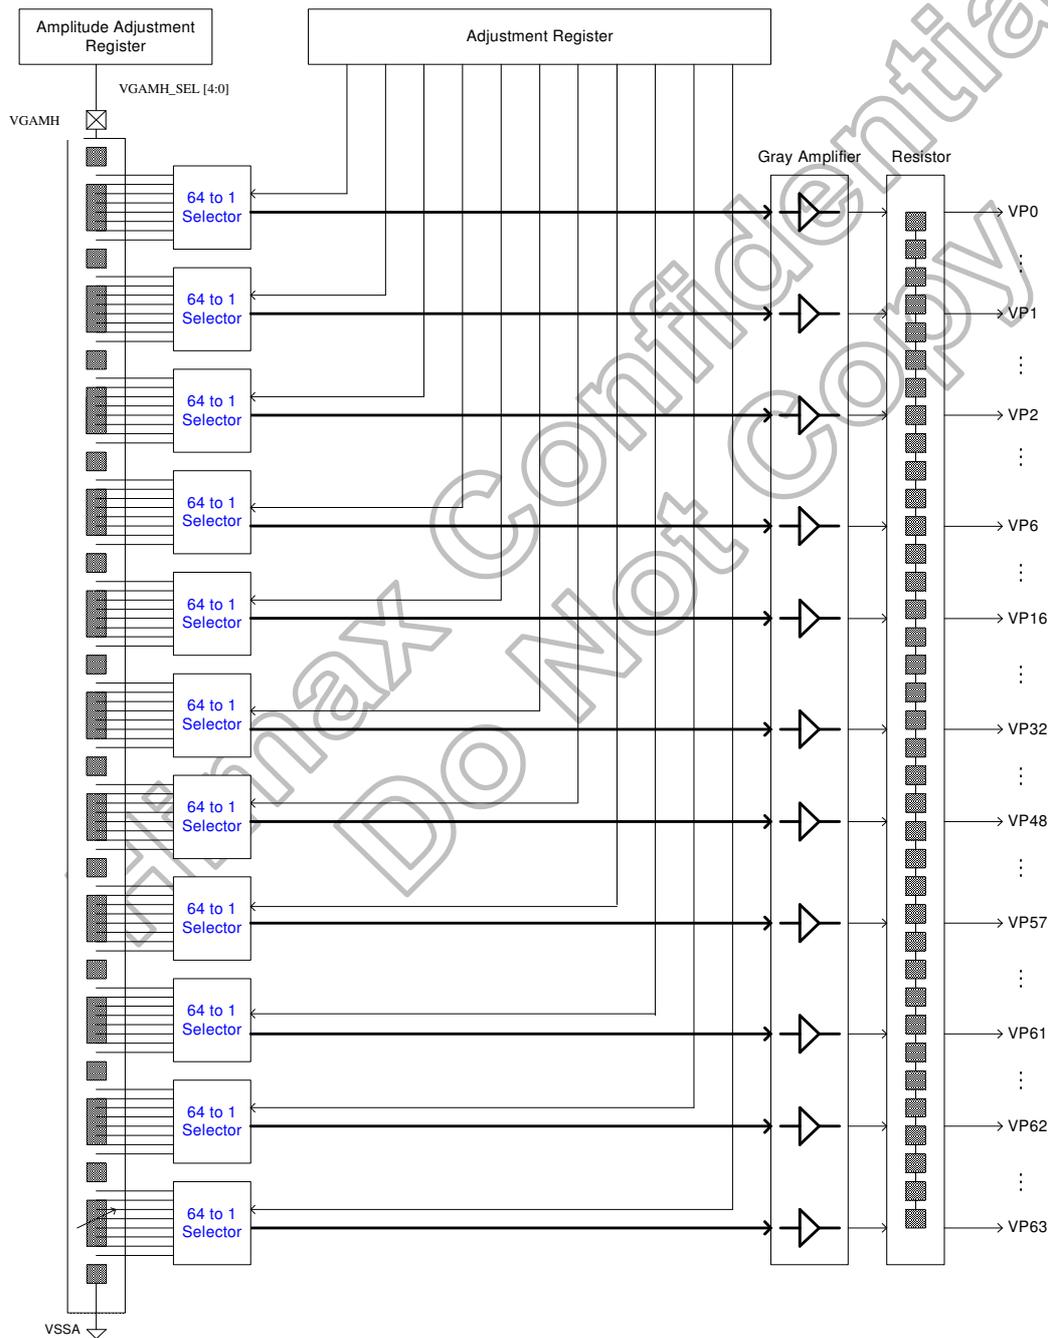

# 11. Gamma Adjustment Function

HX8260-A supports 11 gamma correction reference point:

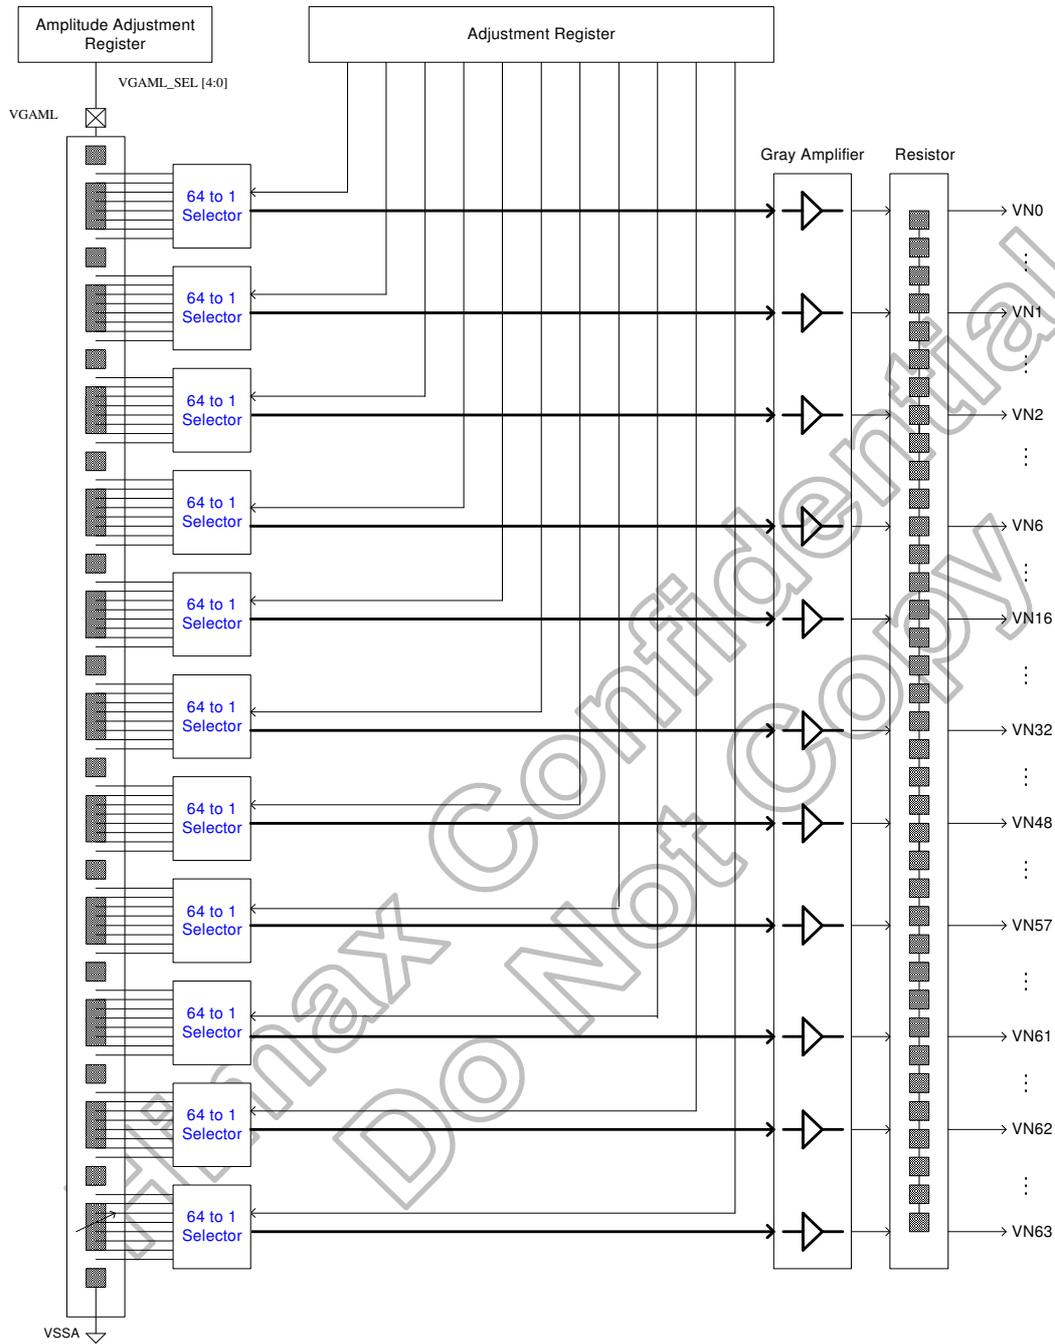

VP0/VP2/VP6/VP16/VP32/VP48/VP57/VP61/VP62/VP63 are generated within driver IC and adjustable by register setting.

## 11.1 Gamma architecture

### 11.1.1 Positive gamma

### 11.1.2 Negative gamma

11.2 Gamma resistor table

| Positive gamma resistor ( $\Omega$ ) |      | Negative gamma resistor ( $\Omega$ ) |      |
|--------------------------------------|------|--------------------------------------|------|
| RV0                                  | 1050 | RV0                                  | 1050 |

Table 11.1: Gamma resistor table

## 12. DC Characteristics

### 12.1 Absolute maximum ratings

| Parameter                            | Symbol  | Spec. |      |      | Unit |
|--------------------------------------|---------|-------|------|------|------|
|                                      |         | Min.  | Typ. | Max. |      |
| I/O voltage                          | VDDI_RX | -0.3  | -    | 3.96 | V    |
|                                      | VDDI_D  |       |      |      |      |
| Power input                          | VCI     | -0.3  | -    | 6.5  | V    |
| VSP voltage                          | VSP     | -0.3  | -    | 6.5  | V    |
| VSN voltage                          | VSN     | -6.5  | -    | 0.3  | V    |
| VPP (OTP power)                      | VPP     | -0.3  | -    | 8.64 | V    |
| Operating temperature <sup>(1)</sup> | Topr    | -20   | -    | +85  | °C   |
| Storage temperature <sup>(1)</sup>   | Tstg    | -55   | -    | 125  | °C   |

Note: (1) Do not let condensation for low temperature.

### 12.2 Typical operating condition

| Parameter       | Symbol  | Spec. |      |      | Unit |
|-----------------|---------|-------|------|------|------|
|                 |         | Min.  | Typ. | Max. |      |
| IOVCC voltage   | VDDI_RX | 1.7   | 1.8  | 1.9  | V    |
|                 | VDDI_D  |       |      |      |      |
| Power input     | VCI     | 2.6   | 3.3  | 6    | V    |
| VSP voltage     | VSP     | 4.5   | -    | 6    | V    |
| VSN voltage     | VSN     | -6    | -    | -4.5 | V    |
| VPP (OTP power) | VPP     | 7.4   | 7.6  | 7.8  | V    |

12.4 MIPI DC electrical characteristics

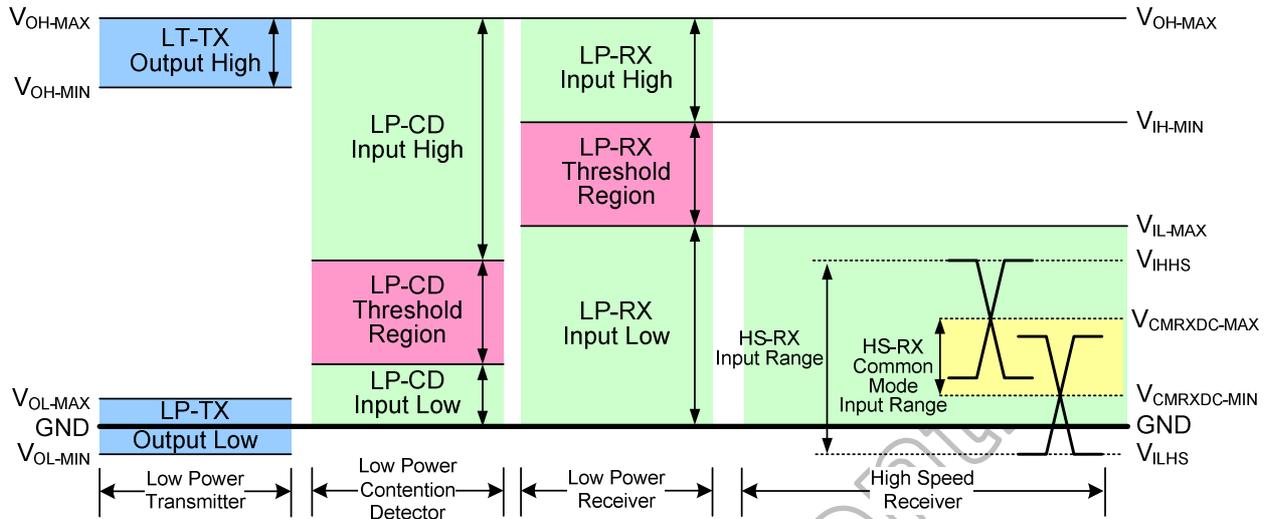

Figure 12.1: MIPI signaling and contention voltage levels

DC characteristics for MIPI LP mode

| Parameter              | Symbol   | Spec. |      |      | Unit |
|------------------------|----------|-------|------|------|------|
|                        |          | Min.  | Typ. | Max. |      |
| Logic 1 input voltage  | $V_{IH}$ | 880   | -    | -    | mV   |
| Logic 0 input voltage  | $V_{IL}$ | 0     | -    | 550  | mV   |
| Logic 1 output voltage | $V_{OH}$ | 1.1   | 1.2  | 1.3  | V    |
| Logic 0 output voltage | $V_{OL}$ | -50   | -    | 50   | mV   |

DC characteristics for MIPI HS mode

| Parameter                                  | Symbol       | Spec. |      |      | Unit     |
|--|--------------|-------|------|------|----------|
|  |              | Min.  | Typ. | Max. |          |
| Common-mode voltage HS Receive mode        | $V_{CMRXDC}$ | 70    | -    | 330  | mV       |
| Differential input high threshold          | $V_{IDTH}$   | -     | -    | 70   | mV       |
| Differential input low threshold           | $V_{IDTL}$   | 70    | -    | -    | mV       |
| Single-ended input high voltage            | $V_{IHHS}$   | -     | -    | 460  | mV       |
| Single-ended input low voltage             | $V_{ILHS}$   | -40   | -    | -    | mV       |
| Differential input impedance               | $Z_{ID}$     | 80    | 100  | 125  | $\Omega$ |
| HS transmit differential voltage (VDP-VDN) | $ VOD $      | 140   | 200  | 270  | mV       |

Note: (1)  $V_{IDTH}$  and  $V_{IDTL}$  only for reference, related to power and ground noise, this spec need to check on panel performance to fine tune

12.5 LVDS mode DC electrical characteristics

| Parameter                                 | Symbol      | Spec.            |      |                  | Unit    | Condition                         |
|---|-------------|------------------|------|------------------|---------|-----------------------------------|
|   |             | Min.             | Typ. | Max.             |         |                                   |
| Differential input high threshold voltage | $R_{XVTH}$  | +0.1             | -    | -                | V       | $R_{XVCM}=1.2V$                   |
| Differential input low threshold voltage  | $R_{XVTL}$  | -                | -    | -0.1             | V       |                                   |
| Input voltage range (singled-end)         | $R_{XVIN}$  | $0.7- V_{ID} /2$ | -    | $1.4+ V_{ID} /2$ | V       | -                                 |
| Differential input common Mode voltage    | $R_{XVCM}$  | 0.7              | -    | 1.4              | V       | -                                 |
| Differential input voltage                | $ V_{ID} $  | 0.2              | -    | 0.6              | V       | -                                 |
| Differential input leakage Current        | $RV_{Xilz}$ | -10              | -    | +10              | $\mu A$ | -                                 |
| LVDS digital operating current            | $I_{ddlvs}$ | -                | 15   | 30               | mA      | Fclk=65MHz, VDD=3.3V              |
| LVDS digital stand-by current             | $I_{stlvs}$ | -                | 10   | 50               | $\mu A$ | Clock & all Functions are stopped |

### 13. AC Characteristics

#### 13.1 MIPI AC characteristics

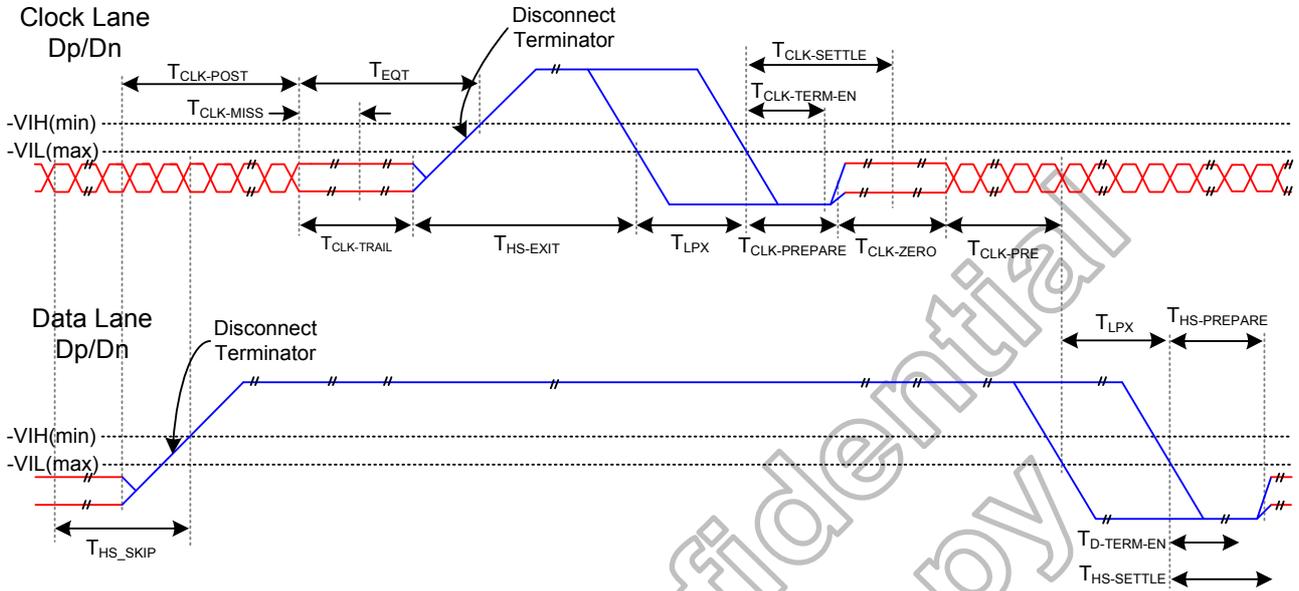

Figure 13.1: Switching the clock lane between clock transmission and low-power mode

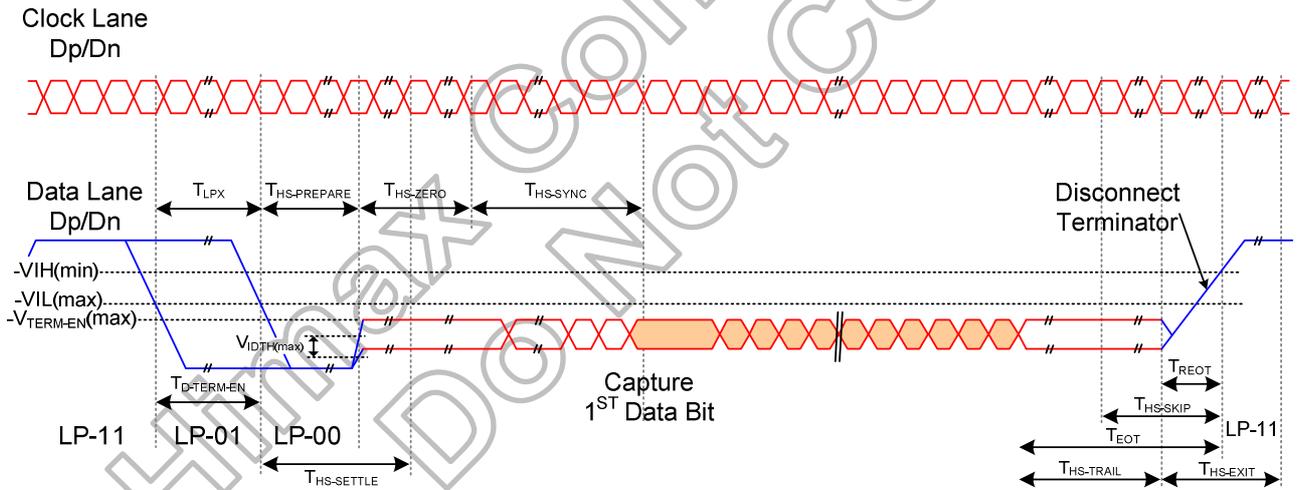

Figure 13.2: Timing of high-speed data transmission in bursts

**MIPI AC Characteristics**

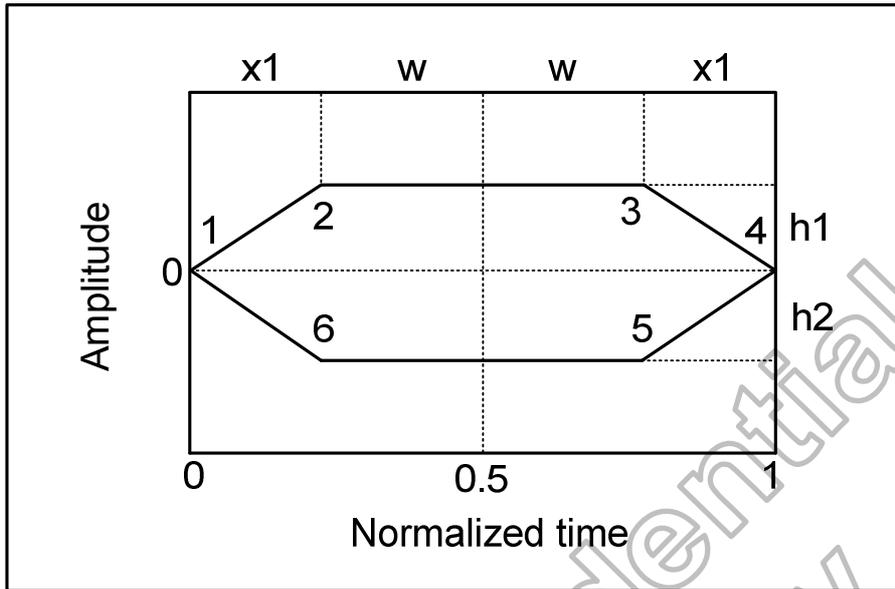

| Parameter  | Description  | Spec.                                     |     |                    | Unit |
|--|--|---|-----|--------------------|------|
|  |  | Min                                       | Typ | Max                |      |
| T <sub>REOT</sub>                                | 30%-85% rise time and fall time  | -   | -   | 35                 | ns   |
| T <sub>CLK-MISS</sub>                            | Timeout for receiver to detect absence of Clock transitions and disable the Clock Lane HS-RX.  | -   | -   | 60                 | ns   |
| T <sub>CLK-POST</sub> *1                         | Time that the transmitter continues to send HS clock after the last associated Data Lane has transitioned to LP Mode. Interval is defined as the period from the end of THS-TRAIL to the beginning of T <sub>CLK-TRAIL</sub> . | 60 ns + 52*UI<br>(For DCS)                | -   | -                  | ns   |
| T <sub>CLK-PRE</sub>                             | Time that the HS clock shall be driven by the transmitter prior to any associated Data Lane beginning the transition from LP to HS mode.   | 8   | -   | -                  | ns   |
| T <sub>CLK-SETTLE</sub>                          | Time interval during which the HS receiver shall ignore any Clock Lane HS transitions, starting from the beginning of T <sub>CLK-PRE</sub> .   | 95  | -   | 300                | ns   |
| T <sub>CLK-TERM-EN</sub>                         | Time for the Clock Lane receiver to enable the HS line termination, starting from the time point when Dn crosses V <sub>IL,MAX</sub> .   | Time for Dn to reach V <sub>TERM-EN</sub> | -   | 38                 | ns   |
| T <sub>HS-SETTLE</sub>                           | Time interval during which the HS receiver shall ignore any Data Lane HS transitions, starting from the beginning of T <sub>HSPREPREARE</sub> .  | 85 ns + 6*UI                              | -   | 145 ns + 10*UI     | ns   |
| T <sub>EOT</sub>                                 | Time from start of T <sub>HS-TRAIL</sub> or T <sub>CLK-TRAIL</sub> period to start of LP-11 state  | -   | -   | 105ns+48*UI        | -    |
| T <sub>HS-EXIT</sub> <sup>(1)</sup>              | time to drive LP-11 after HS burst   | 100                                       | -   | -                  | ns   |
| T <sub>HS-PREPREARE</sub>                        | Time to drive LP-00 to prepare for HS transmission   | 40ns + 4*UI                               | -   | 85ns+6*UI          | ns   |
| T <sub>HS-PREPREARE</sub> + T <sub>HS-ZERO</sub> | T <sub>HS-PREPREARE</sub> + Time to drive HS-0 before the Sync sequence  | 145ns + 10*UI                             | -   | -                  | ns   |
| T <sub>HS-SKIP</sub>                             | Time-out at RX to ignore transition period of EoT  | 40  | -   | 55ns+4*UI          | ns   |
| T <sub>HS-TRAIL</sub>                            | Time to drive flipped differential state after last payload data bit of a HS transmission burst  | 60 + 4*UI                                 | -   | -                  | ns   |
| T <sub>LPX</sub>                                 | Length of any Low-Power state period   | 50  | -   | -                  | ns   |
| Ratio T <sub>LPX</sub>                           | Ratio of T <sub>LPX(MASTER)</sub> /T <sub>LPX(SLAVE)</sub> between Master and Slave side   | 2/3                                       | -   | 3/2                | -    |
| T <sub>TA-GET</sub>                              | Time to drive LP-00 by new TX  | 5*T <sub>LPX</sub>                        |     |                    | ns   |
| T <sub>TA-GO</sub>                               | Time to drive LP-00 after Turnaround Request   | 4*T <sub>LPX</sub>                        |     |                    | ns   |
| T <sub>TA-SURE</sub>                             | Time-out before new TX side starts driving   | T <sub>LPX</sub>                          | -   | 2*T <sub>LPX</sub> | ns   |

**Note:** (1) For image transmission:

T<sub>CLK-POST</sub> min value =164 when MIPI max frequency per lane = 0.53Gbps.

T<sub>CLK-POST</sub> min value =112 when MIPI max frequency per lane = 1Gbps

13.2 MIPI data-clock timing specification

| Symbol | Time (UI) | Voltage      |
|--------|-----------|--------------|
| 1      | 0         | 0            |
| 2      | 0.2       | +70mV (Min.) |
| 3      | 0.8       | +70mV (Min.) |
| 4      | 1         | 0            |
| 5      | 0.8       | -70mV (Min.) |
| 6      | 0.2       | -70mV (Min.) |
| x1     | 0.2       | -            |
| w      | 0.3       | -            |
| h1     | -         | +70mV (Min.) |
| h2     | -         | -70mV (Min.) |

13.3 LVDS mode AC electrical characteristics

| Parameter              | Symbol      | Spec. |                     |      | Unit    | Condition  |
|------------------------|-------------|-------|---------------------|------|---------|--|
|                        |             | Min.  | Typ.                | Max. |         |  |
| Clock frequency        | $R_{XFCLK}$ | 20    | -                   | 85   | MHz     | -  |
| Input data skew margin | $T_{RSKM}$  | 500   | -                   | -    | pS      | $ V_{ID} =400mV$<br>$R_{XVCM}=1.2V$<br>$R_{XFCLK}=71MHz$ |
| Clock high time        | $T_{LVCH}$  | -     | $4/(7 * R_{XFCLK})$ | -    | ns      | -  |
| Clock low time         | $T_{LVCL}$  | -     | $3/(7 * R_{XFCLK})$ | -    | ns      | -  |
| PLL wake-up time       | $T_{emPLL}$ | -     | -                   | 150  | $\mu s$ | -  |

Table 13.1: LVDS mode AC electrical characteristics

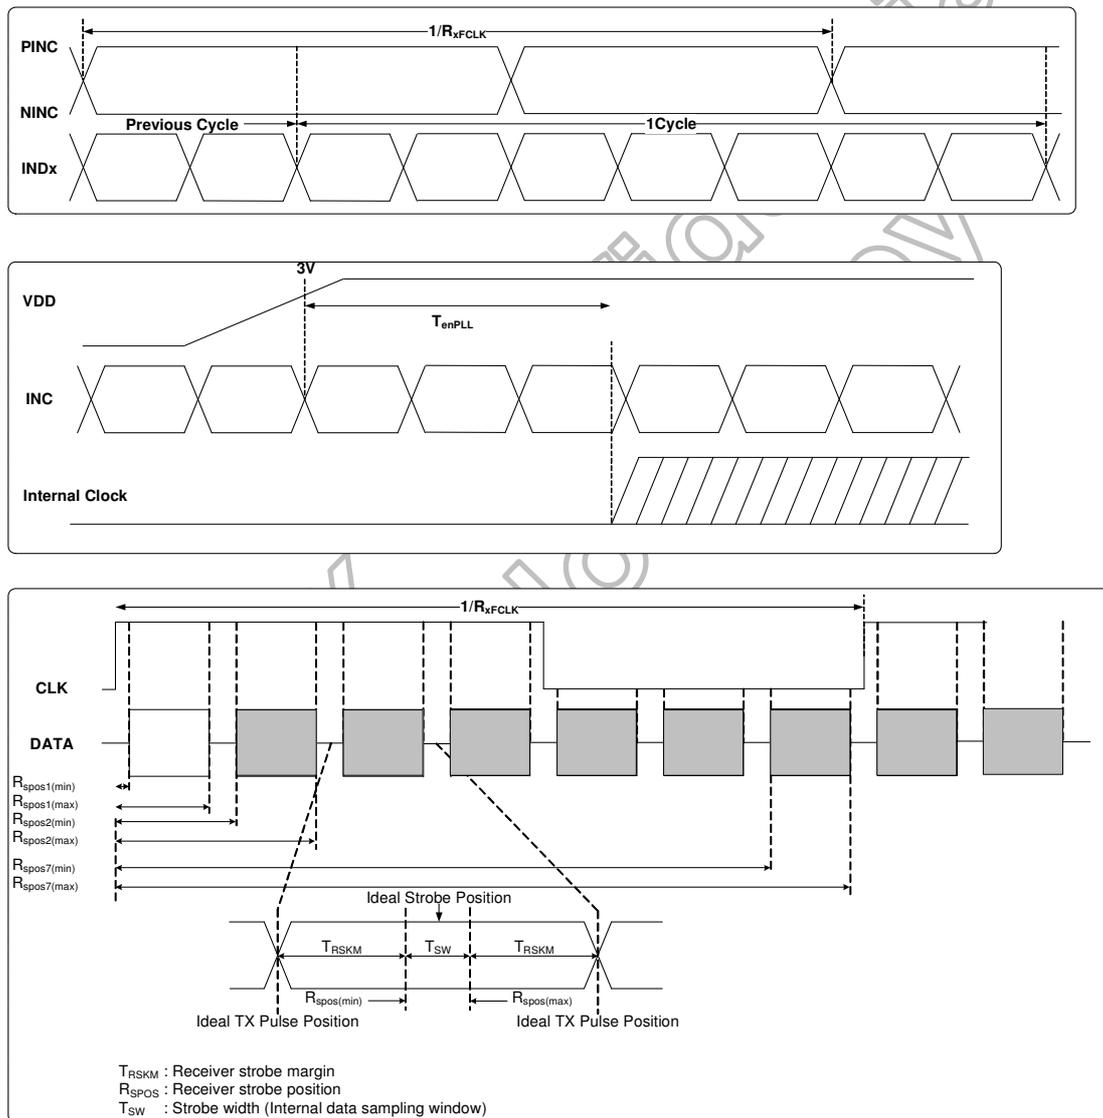

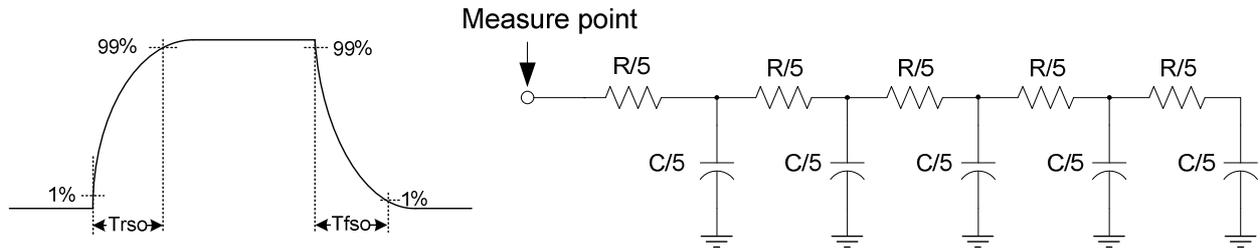

Figure 13.3: LVDS figure

| Parameter            | Symbol     | Spec. |      |         | Unit | Condition                       |
|----------------------|------------|-------|------|---------|------|---------------------------------|
|                      |            | Min.  | Typ. | Max.    |      |                                 |
| Modulation frequency | $SSC_{MF}$ | 23    | -    | 93      | KHz  | -                               |
| Modulation rate      | $SSC_{MR}$ | -     | -    | $\pm 3$ | %    | LVDS clock =71MHz center spread |

Table 13.2: SSC table

13.4 Source output timing (SOUT1 ~ SOUT2400, SL1, SR1)

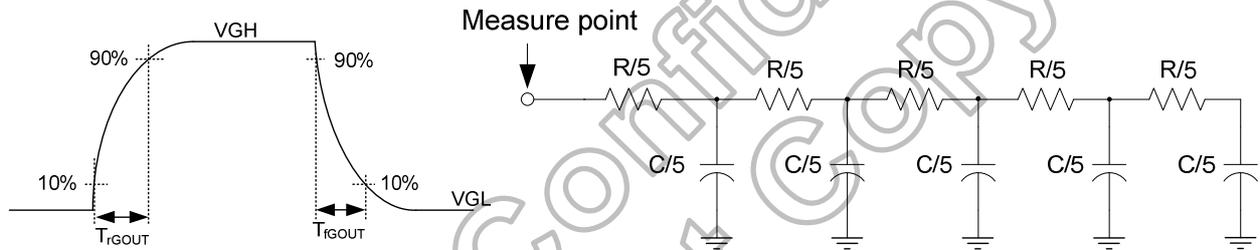

| Parameter                  | Symbol | Condition            | Spec. |      |      | Unit |
|----------------------------|--------|----------------------|-------|------|------|------|
|                            |        |                      | Min.  | Typ. | Max. |      |

Table 13.5: AC characteristic of SPI interface

### 13.6 Timing requirements for RESETB

When RESETB of the reset pin equals to Low, it will be in the condition of reset. When it is in the condition of reset, it will make the device recover the initial set.

However, in order to avoid the reset noise cause reset, there is a mechanism to judge about whether the reset is needed or not.

The closed interval of Low can be shown as the following.

(VDDI\_D=1.7V~1.9V, VSS=0V, T<sub>A</sub>=-20°C~+85°C)

| Parameter             | Symbol | Condition | Spec. |      |      | Unit |
|-----------------------|--------|-----------|-------|------|------|------|
|                       |        |           | Min.  | Typ. | Max. |      |
| Reset low pulse width | Trst   | -         | 20    | -    | -    | μs   |
